Economy of Low Carbon Resilient Development Susannah Fisher, Neha Rai, 2016-10-04 Over the last decade policies and financing decisions aiming to support low carbon resilient development within the least developed countries have been implemented across several regions Some governments are steered by international frameworks such as the UN Framework Convention on Climate Change UNFCCC while others take their own approach to planning and implementing climate resilient actions Within these diverse approaches however there are unspoken assumptions and normative assessments of what the solutions to climate change are who the most appropriate actors are and who should benefit from these actions This book examines the political economy dynamics or the underlying values knowledge discourses resources and power relationships behind decisions that support low carbon resilient development in the least developed countries While much has been written on the politics of climate change this book will focus on the political economy of national planning and the ways in which the least developed countries are moving from climate resilient planning to implementation The book will use empirical evidence of low carbon resilient development planning in four countries Bangladesh Ethiopia Rwanda and Nepal Different approaches to low carbon resilience are critically analysed based on detailed analysis of key policy areas This book will be of great interest to policy makers practitioners students and scholars of climate change and sustainable development

Climate, Environmental Hazards and Migration in Bangladesh Max Martin, 2017-07-20 The apocalyptic visions of climate change that are projected in the media often involve extreme weather events disasters and mass migration of poor people This book takes a critical look at this notion drawing on research in Bangladesh a country located at the heart of

debates on climate change and migration This book argues that rather than leading to dramatic events climatic and environmental impacts often cause incremental changes in people s habitats and livelihoods making them migrate in search of better places and income With or without climate change climatic and environmental factors can impoverish people and drive displacement and migration especially in the global South These influences including disasters need not necessarily make people move but instead sometimes trap the poorest and the most vulnerable people in their places exposed to hazards or make them migrate to even riskier places such as crowded and flood prone urban slums This book argues that restrictions placed on people s mobility options could increase their vulnerability and favours proactive migration policies This timely contribution explains the climate hazard migration nexus in an accessible engaging language for students of geography development studies politics and environmental studies as well as humanitarian and development practitioners and policymakers

Rural Development in Practice Willem van Eekelen,2020-05-04 Rural Development in Practice focuses on the evolving nature of rural development in the Global South It outlines how we got to where we are today checks what we can learn from history and explores the development drivers facilitators and obstacles most likely to shape the years ahead The book covers the management of fishing grounds forests grazing lands water sources and soil and looks at the effects of infrastructure trade mechanisms and new crop varieties on farming The author discusses the opportunities and challenges of microfinance social safety nets and migration and assesses the way ICT and climate change are changing everything rapidly Real life examples exercises role plays textboxes anecdotes and illustrative artwork are used to bring concepts and theories to life and every chapter concludes with a section that explores how best to tackle the tough and complex dilemmas of our time Rural Development in Practice is essential reading for students at all levels and may be of benefit for programme and policy staff in rural focused government departments multilateral agencies and non government organisations

Local Activism for Global Climate Justice Patricia E. Perkins,2019-09-06 This book will inspire and

spark grassroots action to address the inequitable impacts of climate change by showing how this can be tackled and the many benefits of doing so. With contributions from climate activists and engaged young authors, this volume explores the many ways in which people are proactively working to advance climate justice. The book pays special attention to Canada and the Great Lakes watershed, showing how the effects of climate change span local, regional, and global scales through the impact of extreme weather events such as floods and droughts, with related economic and social effects that cross political jurisdictions. Examining examples of local level activism that include organizing for climate resilient and equitable communities, the dynamic leadership of Indigenous peoples, especially women, for water and land protection, and diaspora networking, *Local Activism for Global Climate Justice* also provides theoretical perspectives on how individual action relates to broader social and political processes. Showcasing a diverse range of inspirational and thought provoking case studies, this book will be of great interest to students and scholars of climate justice, climate change policy, climate ethics, and global environmental governance, as well as teachers and climate activists.

The UN Watercourses Convention in Force Flavia Rocha Loures, Alistair Rieu-Clarke, 2013-09-11 At the UN General Assembly in 1997, an overwhelming majority of States voted for the adoption of the United Nations Convention on the Law of the Non Navigational Uses of International Watercourses, a global overarching framework governing the rights and duties of States sharing freshwater systems. Globally, there are 263 internationally shared watersheds which drain the territories of 145 countries and represent more than forty percent of the Earth's land surface. Hence, inter State cooperation towards the sustainable management of transboundary water supplies, in accordance with applicable international legal instruments, is a topic of crucial importance, especially in the context of the current global water crisis. This volume provides an assessment of the role and relevance of the UN Watercourses Convention and describes and evaluates its entry into force as a key component of transboundary water governance. To date, the Convention still requires further contracting States before it can enter into force. The authors describe the drafting and negotiation of the Convention and its relationship to other multilateral environmental agreements. A series of case studies assess the role of the Convention at various levels: regional (European Union, East Africa, West Africa, Central Asia, Central America, and South America), river basin (e.g. the Mekong and Congo), and national (e.g. Ethiopia and Mexico). The book concludes by proposing how future implementation might further strengthen international cooperation in the management of water resources to promote biodiversity conservation, as well as sustainable and equitable use.

Institutional Capacity for Climate Change Response Theresa Scavenius, Steve Rayner, 2017-12-15 In a period of rapid climate change and climate governance failures, it is crucial to understand and address how effectively different political institutions can and should react to climate change. The term institutional response capacity can be defined as a measurement for how effective political institutions may respond to threats and challenges such as climate change. This book sets out to provide a venue for the discussion of how to conduct climate politics by offering new perspectives on how social and political institutions are capable of responding to

climate change In doing so the book explores how democracy institutional design and polycentric governance influence social and political entities capacity to mitigate adapt address and transform climate change The book offers building blocks for a new agenda of climate studies by focusing on institutional response capacity and by offering a new approach to climate governance at a time when many political initiatives have failed This interdisciplinary volume is a valuable resource for academics researchers and policy makers in the areas of anthropology political science geography and environmental studies

Elgar Encyclopedia of Climate Policy Daniel J. Fiorino, Todd A. Eisenstadt, Manjyot K.

Ahluwalia, 2024-04-12 The Elgar Encyclopedia of Climate Policy provides a comprehensive and compelling account of the causes and potential solutions to one of the most pressing global challenges of the 21st century: climate change. With deep intellectual rigour, this Encyclopedia adeptly surveys the nature and application of various international climate change policies. Catalyzing Development through ICT Adoption Harleen Kaur, Ewa Lechman, Adam Marszk, 2017-06-05 This book examines the role that Information and Communication Technologies (ICTs) play in growth and economic development, specifically for developing countries. It highlights multiple methodologies for quantifying the impact of ICTs. This includes quantitative and qualitative methods but also novel, conclusive and informative methodological approaches for measuring ICTs' influence on economic development. The book highlights trends, perspectives and success stories for different developing countries. ICTs bring new business models, innovations, capital, labor substitution, improved goods and services to developing markets. Because they can spread rapidly with little cost and require minimal skills for usage, ICTs create a solid background for social and economic gains. They enable significant reduction in information asymmetries, which improves access to economic activities for a multitude of agents, fostering participation, inter alia, in the labor market of disadvantaged societal groups. After almost two decades of rapid diffusion of ICT in the developing world, this book seeks to assess the real benefits and consequences of ICTs' adoption in developing countries. The chapters use broad, real-world based evidence to provide a better understanding of the precise nature of new technologies and their impact on the country's economy and society. **Climate Vulnerability, Volume 5**, 2013-06-14 Climate Vulnerability Volume 5 Human Rights Approaches to Climate Change Sumudu Atapattu, 2015-10-16 Despite the clear link between climate change and human rights, with the potential for virtually all protected rights to be undermined as a result of climate change, its catastrophic impact on human beings was not really understood as a human rights issue until recently. This book examines the link between climate change and human rights in a comprehensive manner. It looks at human rights approaches to climate change, including the jurisprudential bases for human rights and the environment, the theoretical framework governing human rights and the environment, and the different approaches to this, including benchmarks. In addition to a discussion of human rights implications of international environmental law principles in the climate change regime, the book explores how the human

rights framework can be used in relation to mitigation adaption and adjudication Other chapters examine how vulnerable groups women indigenous peoples and climate refugees would be disproportionately affected by climate change The book then goes on to discuss a new category of people created by climate change those who will be rendered stateless as a result of states disappearing and displaced by climate change and whether human rights law can adequately address these emerging issues

Advancements in Urban Environmental Studies Atiqur Rahman, Shouraseni Sen Roy, Swapan Talukdar, Shahfahad, 2023-03-03 According to UN estimates approximately nearly half of the world s population now lives in cities and that figure is expected to rise to almost 70% by 2050 Cities now account for around 70% of worldwide greenhouse gas emissions and this percentage is predicted to rise in the near future as a result of projected increases in global urbanization patterns It is widely acknowledged that irrational urban planning and design can increase emissions while also exacerbating threats and risks resulting in a slew of environmental issues such as urban heat islands air pollution flooding amongst other issues as well as environmental social and economic losses Therefore these concerns must be addressed promptly in order to cope up with these rising difficulties and make urban environments safer for residents With the advancement of remote sensing technology and the use of current remote observation systems urban data science remote sensing and artificial intelligence AI modeling and quantifying emergent difficulties in urban regions and urban systems have become easy They aid in the quantitative analysis of urban shape functions and human behavior in cities Harvesting data developing models and suggesting new methodologies will be aided by combining urban ecology with new breakthroughs in data science This book is of great value to a diverse group of academicians scientists students environmentalists meteorologists urban planners remote sensing and GIS experts with a common interest in geospatial sciences within the earth environmental sciences as well as human and social sciences
