*Getting to Grips with BIM* James Harty, Tahar Kouider, Graham Paterson, 2015-12-14 With the UK government's 2016 BIM threshold approaching support for small organisations on interpreting filtering and applying BIM protocols and standards is urgently required. Many small UK construction industry supply chain firms are uncertain about what Level 2 BIM involves and are unsure about taking first steps towards having BIM capability. As digitisation increasingly impacts on work practices, *Getting to Grips with BIM* offers an insight into an industry in change supplemented by practical guidance on managing the transition towards more widespread and integrated use of digital tools to manage the design construction and whole life use of buildings.

**Delivering Value with BIM** Adriana Sanchez, Keith Hampson, Simon Vaux, 2016-03-31 Building Information Modelling BIM is a global phenomenon which is gaining significant momentum across the world. Currently there is little information on how to realise and monitor benefits from implementing BIM across the life cycle of a built environment asset. This book provides a practical and strategic framework to realise value from implementing BIM by adapting Benefit Realisation Management theory. It presents an approach for practitioners aiming to implement BIM across the life cycle of built environment assets including both buildings and infrastructure. Additionally, the book features wide ranging information about BIM, the challenges of monitoring progress towards benefit goals and the greater context of implementation, a set of dictionaries that illustrate how benefits can be achieved, what the benefit flows are and the enabling tools and processes that contribute to achieving and maximising them, a suite of measures that can serve to monitor progress with examples of how they have been used to measure benefits from BIM, real world examples from across the world and life cycle phases that show how these benefits can be achieved and information on international maturity and competency measures to complement the value realisation framework. Including a blend of academic and industry input, this book has been developed in close collaborative consultation with industry, government and international research organisations and could be used for industry courses on BIM benefits and implementation for asset management or by universities that teach BIM related courses.

**BIM Development and Trends in Developing Countries: Case Studies** John Rogers, Heap-Yih Chong, Christopher Preece, Chai Chai Lim and Himel Suranga Jayasena, 2015-03-06 Building Information Modeling BIM or the process of generating and managing digital information about physical representations of constructions has been effectively adopted and benefited numerous civil engineering projects across the globe, particularly in developed countries. BIM Development and Trends in Developing Countries addresses the philosophies and practices for improved application of BIM in developing countries. Two case studies are presented in this reference: one from Malaysia and another representing Sri Lanka. Readers are given an introduction and background of the Malaysian and Sri Lankan construction industry and a critical review of BIM's philosophies, development and applications in different stages of a construction project. The authors present their recommendations on the way forward for BIM practices articulated from the two perspectives, namely academia

and industrial BIM practice The case studies in this book highlight the role of adequate BIM software techniques and the importance of governmental support in facing building challenges at the moment BIM Development and Trends in Developing Countries provides readers useful insights on the evolution of BIM practice in emerging countries and is a unique report on two specific scenarios in BIM development Engineers architects urban planners and policy makers around the globe seeking to understand practical BIM implementation and trends will find this reference invaluable **Global**

**Construction Data** Stephen Gruneberg, 2019-08-12 Global construction data is vital for contractors governments international organisations policy makers academic researchers and statisticians As the global population of the world expands the sustainability of the built environment raises the political agenda and the need to manage infrastructure and buildings in both urban and rural contexts becomes ever more pressing How much more can the built environment grow and how can it be managed sustainably This edited volume addresses how we can find a possible way through the inconsistencies between national construction data sets to devise a consistent approach to national construction data to further the global sustainability agenda and inform policy making This search begins in Part I which looks at the methods and definitions used in construction statistics in different countries Part II considers examples of different types of construction data from the cost of materials measuring work on high rise buildings and existing stock In Part III the authors consider construction data internationally beginning with the problem of comparing data in different countries using exchange rates and purchasing power parities PPPs comparing innovation processes in different countries and looking at the provision of building design internationally In Part IV the international theme is continued by comparing accounting practices and company performance in different countries and concludes with an international comparison of construction industries This book raises awareness of the significance of the construction industry globally and the importance of data to measure it It informs the discussion of the best ways of handling the consequences of policies affecting the built environment and the effect of the built environment on the rest of the economy and society It is essential reading for international economists construction industry consultants policy makers construction statisticians and academics eWork and eBusiness in Architecture, Engineering and Construction
