Online Decision Making Radioactive Disposal Routledge Management:

The Politics of Radioactive Waste Management Gianluca Ferraro, 2018-11-01 Environmental concerns have pushed the decarbonisation of the European economy high on the EU political agenda. This has renewed old debates about the role of nuclear energy in the European economy and society that gravitate around the issues of nuclear safety and radioactive waste management. RWM carries many elements of technical complexity, scientific uncertainty and social value which makes policy decisions highly controversial. Public participation is usually believed to improve these decisions, ease their implementation by solving substantial conflicts and enhance trust and social acceptance. Drawing upon sources including Euratom and the OECD Nuclear Energy Agency, the author offers a detailed overview of public involvement in RWM in the EU, analysing the implementation of national policies through official programmes and the views of stakeholders from all Member States. This book highlights the key successes and challenges in the quest for greater participation in RWM and extrapolates insights for other contested energy infrastructures and controversies in land use. This book will be of great relevance to students, scholars and practitioners with an interest in radioactive waste management, energy policy and EU environmental politics and policy.

Decision-making and Radioactive Waste Disposal Andrew Newman, Gerry Nagtzaam, 2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year. Vital medical procedures, industrial processes and basic science research also produce significant quantities of waste. All of this waste must be shielded from the population for extended periods of time. Finding suitable locations for disposal facilities is beset by two main problems: community responses to siting proposals are generally antagonistic and, as a result, governments have tended to be reactive in their policy making. **Decision making and Radioactive Waste Disposal** explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made. Five countries are featured: the US, Australia, Spain, South Korea and Switzerland. This book seeks to establish an understanding of the political, economic, environmental, legal and social dimensions of siting across those countries. This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts. The book will be of interest to students and scholars of environmental law, justice, management, politics, energy and security policy, as well as decision makers in government and industry.

The Routledge Research Companion to Energy Geographies Stefan Bouzarovski, Martin J Pasqualetti, Vanesa Castán Broto, 2017-07-06 Energy has become a central concern of many strands of geographical inquiry from global climate change to the effects of energy decisions on our lives However many aspects of the black box of relationships at the energy society interface remain unopened especially in terms of the spatial underpinnings of energy production and consumption within nations cities and regions Debates focusing on the location and nature of energy flows frequently fail to consider the multiple geographical networks that illustrate and explain the distribution of fuels and services around the world Providing an integrated perspective on the complex interdependencies between energy and geography The Routledge Research Companion to Energy Geographies offers a timely conceptual framework to study the multiple facets of energy geography including security space and place planning environmental science economics and political science Illustrating how a geographic approach towards energy can aid decision making pathways in the domains of social justice and environment this book provides insights that will help move the international community toward greater cooperation stability and sustainability

The Routledge Companion to Alternative Organization Martin Parker, George Cheney, Valérie Fournier, Chris Land, 2014-01-03 Despite the Great Recession slightly different forms of global capitalism are still portrayed as the only game in town by the vast majority of people in power in the world today Unbridled growth trade liberalisation and competition are advocated as the only or best ways of organizing the contemporary world Unemployment yawning gaps between rich and poor political disengagement and environmental devastation are too often seen as acceptable side effects of the dominance of neo liberalism But the reality is that capitalism has always been contested and that people have created many other ways of providing for themselves This book explores economic and organizational possibilities which extend far beyond the narrow imagination of economists and management theorists Chapters on co operatives community currencies the transition movement scrounging co housing and much more paints a rich picture of the ways in which another world is not only possible but already taking shape The aim of this companion is to move beyond complaining about the present and into exploring this diversity of organisational possibilities Our starting point is a critical analysis of contemporary global capitalism is merely the opening for thinking about organizing as a form of politics by other means and one that can be driven by the values of solidarity freedom and responsibility This comprehensive

companion with an international cast of contributors gives voice to forms of organizing which remain unrepresented or marginalised in organizational studies and conventional politics yet which offer more promising grounds for social and environmental justice It is a valuable resource for students activists and researchers interested in alternative approaches to economy and society in a variety of disciplinary and interdisciplinary fields Socioeconomic Evaluation of Megaprojects Markku Lehtonen, Pierre-Benoît Joly, Luis Aparicio, 2016-11-22 The governance and evaluation of megaprojects that is large scale complex high stakes infrastructure projects usually commissioned by governments and delivered through partnerships between public and private organisations is receiving increased attention However megaproject evaluation has hitherto largely adopted a linear rationalist perspective to explain the frequent failure of such projects to meet the iron triangle of performance criteria delivering on time within budget and according to specifications This approach recommends greater control and accountability to remedy megaproject pathologies Drawing on empirical examples mainly from the transport sector and radioactive waste disposal this book offers new perspectives to megaproject evaluation Comprising contributions from leading experts in project evaluation and appraisal this collection opens up new avenues by suggesting two ways of improving megaproject evaluation 1 approaches that go beyond the dominant linearrationalist notion of policy processes and emphasise instead the objective of opening up appraisal processes in order to enhance learning and reflexivity and 2 approaches that extend evaluative criteria beyond the iron triangle to cover the various socioeconomic impacts and preconditions for project success This volume will be of great relevance to scholars and practitioners with an interest in megaprojects energy and climate policy radioactive waste management urban design and project planning and management

Intergenerational Democracy, Environmental Justice and the Case of Nuclear Waste Lee Towers, Matthew Cotton, 2024-10-07 This book explores the interplay between intergenerational justice and intragenerational justice using nuclear waste management as a consistent case to explore these themes Lee Towers and Matthew Cotton examine the issue of intergenerational justice from a social scientific perspective drawing on central case studies of nuclear waste management in Canada Finland and the United Kingdom They connect indigenous philosophies and notions of justice with the concept of intergenerational democracy advocating for better inclusion of youth and elders in decision making that affects their well being As such the book s primary objectives are fourfold To assess whether trade offs between intergenerational and intragenerational justice are necessary and if so what these trade offs are and how they might be resolved To critically assess dominant western liberal philosophical approaches that shape contemporary intergenerational justice thinking in policy and practice and consider alternatives drawn from anthropology and indigenous philosophies To assess how far our current capitalist system can achieve substantive forms of justice To critically examine three nuclear waste management case studies and assess how far these achieve environmental and energy justice and how they exemplify tensions between inter and intragenerational justice This short accessible volume will be of great interest to students and scholars of energy

Nuclear Waste Management in a Globalised World Urban Strandberg, Mats

Andrén, 2013-09-13 High level nuclear waste HLW is a controversial and risky issue For the next 100 years the HLW will be subject to policy decisions and value assessments Physically safe technologically stable and socio economically sustainable HLW management will top the agenda That must be accomplished in a society whose segments are both stable and in a rapid state of flux under the influence of global as well as national factors private interests as well as the vagaries of national politics Among the challenges to be faced is how to codify responsibilities of nuclear industry governments and international organisations and any adopted management policy must attain legitimacy at the local national regional and global levels All such considerations raise questions about the practical and theoretical knowledge This special issue book will address these questions by exploring HLW management in Canada France Germany India Sweden the UK and the USA Special emphasis will be placed on highlighting national context current trends and uncertainties with relevance to a socially sustainable contemporary and future HLW management

Saving the Oceans Through Law James Harrison, 2017

The oceans cover more than seventy per cent of the surface of the planet and they provide many vital ecosystem services However the health of the world's oceans has been deteriorating over the past decades and the protection of the marine environment has emerged as one of the most pressing legal and political challenges for the international community An effective solution depends upon the cooperation of all states towards achieving agreed objectives This book provides a critical assessment of the role that international law plays in this process by explaining and evaluating the various legal instruments that have been negotiated in this area as well as key trends in global ocean governance Starting with a detailed analysis of the United Nations Convention on the Law of the Sea the book considers the main treaties and other legal texts that seeks to prevent reduce and control damage to the marine environment caused by navigation seabed exploitation fishing dumping and land based activities as well as emerging pressures such as ocean noise and climate change The book demonstrates how international institutions have expanded their mandates to address a broader range of marine environmental issues beyond basic problems of pollution control to include the conservation of marine biological diversity and an ecosystems approach to regulation It also discusses the development of diverse regulatory tools to address anthropogenic impacts on the marine environment and the extent to which states have adopted a precautionary approach in different maritime sectors Whilst many advances have been made in these matters this book highlights the need for greater coordination between international institutions as well as the desirability of developing stronger enforcement mechanisms for international environmental rules

investigating the issues at stake Climate Change and Safety in High Risk Industries brings together critical appraisals of the challenges that will be faced by industry regulatory bodies and decision makers in coming decades It analyzes whether safety and sustainability are accurately thought of as competing imperatives or rather offer possibilities for a more cooperative approach to the necessary adaptations in our modes of production and consumption **Communication Yearbook 39** Elisia Cohen,2015-04-10 Communication Yearbook 39 continues the tradition of publishing state of the discipline literature reviews and essays Editor Elisia Cohen presents a volume that is highly international and interdisciplinary in scope with authors and chapters representing the broad global interests of the International Communication Association The contents include summaries of communication research programs that represent the most innovative work currently Offering a blend of chapters emphasizing timely disciplinary concerns and enduring theoretical questions this volume will be valuable to scholars throughout communication studies **Environment and Business** Alasdair Blair,David Hitchcock,2004-08-02 This text examines how businesses and the environment interact It is ideal for students with no previous knowledge of business studies It examines in depth the ways in which business industry the physical environment environmentalism and social change have evolved alongside each other The authors use boxed case studies to highlight how business practice and the environment interact at levels from local to global with examples from multinational companies government bodies national charities and local enterprise The book also contains a large number of informative diagrams The case studies include Shell Oil s environmental policy railways and the industrial revolution the British National Trust s business enterprises Sainsbury s approach to organic foods Australia s landcare scheme changing trends in retailing Brent Spar big game hunting and conservation *Helping Scientists to Communicate Well for All Considered: Strategic Science Communication in an Age of Environmental and Health Crises* Scott McWilliams,Marcia Allison,Marina Joubert,Ingrid Lofgren,Brianne Suldovsky,2022-09-16 **The British National Bibliography** Arthur James Wells,2004 **Books in Print Supplement**,2002 Paperbound Books in Print ,1991 **Democracy in Practice** Thomas C. Beierle,2010-09-30 In spite of the expanding role of public participation in environmental decisionmaking there has been little systematic examination of whether it has to date contributed toward better environmental management Neither have there been extensive empirical studies to examine how participation processes can be made more effective Democracy in Practice brings together for the first time the collected experience of 30 years of public involvement in environmental decisionmaking Using data from 239 cases the authors evaluate the success of public participation and the contextual and procedural factors that lead to it Thomas Beierle and Jerry Cayford demonstrate that public participation has not only improved environmental policy but it has also played an important educational role and has helped resolve the conflict and mistrust that often plague environmental issues Among the authors findings are that intensive problem solving processes are most effective for achieving a broad set of social goals and participant motivation and agency responsiveness are key factors for success

Democracy in Practice will be useful for a broad range of interests For researchers it assembles the most comprehensive data set on the practice of public participation and presents a systematic typology and evaluation framework For policymakers political leaders and citizens it provides concrete advice about what to expect from public participation and how it can be made more effective Democracy in Practice concludes with a systematic guide for use by government agencies in their efforts to design successful public participation efforts
