 Gordon W. Frankie, Alfonso Mata, S. Bradleigh Vinson, 2025-03-21 The beautiful tropical dry forest of northwest Costa Rica with its highly seasonal rainfall and diversely vegetated landscape is disappearing even more rapidly than Costa Rica's better known rain forest primarily because it has been easier to convert to agriculture This book based on more than thirty years of study offers the first comprehensive look at the ecology biodiversity and conservation status of this endangered and fragile region The contributors from Costa Rica Britain Mexico and the United States and representing the fields of ecology environmental education policy and the law examine the major plant and animal groups living in the dry forest and present the first technical evaluation of Costa Rica's conservation efforts As they assess the status of their area of specialty in the dry forest the contributors also look beyond this particular region to show how its plants and animals are ecologically and evolutionarily connected to other geographic areas in Costa Rica and Central America Their chapters cover topics such as watershed and coastal management plant phenology pollination insects birds mammals amphibians and reptiles They also consider the socioeconomic policy legal and political aspects of biodiversity conservation giving the volume a wide ranging perspective and making a unique contribution to our knowledge of the tropical dry forest The book concludes with an important synthesis of the contributors recommendations on future directions policies and actions that will better conserve biodiversity in Costa Rica and other neotropical forests as well This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 2005

 Louise E. Buck, Charles C. Geisler, John Schelhas, Eva Wollenberg, 2001-06-21 We live in a world of wide pendulum swings regarding management policies for protected areas particularly as they affect the involvement of local people in management Such swings can be polarizing and halt on the ground progress There is a need to find ways to protect biodiversity while creating common ground and building management capacity

**Emergent Ecologies** Eben Kirksey, 2015-11-27 In an era of global warming natural disasters endangered species and devastating pollution contemporary writing on the environment largely focuses on doomsday scenarios Eben Kirksey suggests we reject such apocalyptic thinking and instead find possibilities in the wreckage of ongoing disasters as symbiotic associations of opportunistic plants animals and microbes are flourishing in unexpected places Emergent Ecologies uses artwork and contemporary philosophy to illustrate hopeful

opportunities and reframe key problems in conservation biology such as invasive species extinction environmental management and reforestation Following the flight of capital and nomadic forms of life through fragmented landscapes of Panama Costa Rica and the United States Kirksey explores how chance encounters historical accidents and parasitic invasions have shaped present and future multispecies communities New generations of thinkers and tinkerers are learning how to care for emergent ecological assemblages involving frogs fungal pathogens ants monkeys people and plants by seeding them nurturing them protecting them and ultimately letting go Green Encounters Luis Antonio Vivanco, 2006

Levin, 2015-01-22

A great many species are threatened by the expanding human population Though the public generally favors environmental protection conservation does not come without sacrifice and cost Many decision makers wonder if every species is worth the trouble Of what consequence would the extinction of say spotted owls or snail darters be Are some species expendable Given the reality of limited money for conservation efforts there is a compelling need for scientists to help conservation practitioners set priorities and identify species most in need of urgent attention Ecology should be capable of providing guidance that goes beyond the obvious impulse to protect economically valuable species salmon or aesthetically appealing ones snow leopards Although some recent books have considered the ecosystem services provided by biodiversity as an aggregate property this

is the first to focus on the value of particular species. It provides the scientific approaches and analyses available for asking what we can expect from losing or gaining species. The contributors are outstanding ecologists, theoreticians, and evolutionary biologists who gathered for a symposium honoring Robert T. Paine, the community ecologist who experimentally demonstrated that a single predator species can act as a keystone species whose removal dramatically alters entire ecosystem communities. They build on Paine's work here by exploring whether we can identify species that play key roles in ecosystems before they are lost forever. These are some of our finest ecologists asking some of our hardest questions. They are in addition to the editors: S. E. B. Abella, G. C. Chang, D. Doak, A. L. Downing, W. T. Edmondson, A. S. The Quintessential Naturalist Douglas A. Kelt, 2007-07-31. Oliver P. Pearson's studies on mammalian biology remain standard reading for ecologists, physiologists, taxonomists, and biogeographers. Reflecting this, the papers gathered here continue to expand our understanding of the ecology and evolution of subterranean mammals and of ecology, taxonomy, and biogeography of Neotropical mammals, a group that was central to the latter half of Pearson's career.

*The Golden Toad* Trevor Ritland, Kyle Ritland, 2025-06-17. The Costa Rican cloud forest, a mysterious amphibian killer and a vanished species with support from Leonardo DiCaprio's Re:wild campaign, twin documentarians and environmental writers follow their father's footsteps into the heart of the modern extinction crisis. As young boys, Trevor and Kyle Ritland were fascinated by the magnificent golden toad of Costa Rica, a brilliant species their biologist father showed them in his projector's slide shows. Native to only one wind-battered ridgeline high on the continental divide above the cloud forests of Monteverde, thousands of golden toads would congregate for a few weeks each year in ephemeral pools among the twisted roots to mate, deposit their offspring, and retreat again beneath the earth. But from one year to the next, the toads disappeared without a trace; the last of them vanished more than thirty years ago. Since then, only rumors remain, alleged sightings by local residents which beg the question: could the golden toad still be alive? In *The Golden Toad*, Trevor and Kyle set off to investigate an environmental mystery with unexpected revelations, a story that speaks to our own collective and uncertain future. Guided by Costa Rican naturalists, including the last person to have seen the golden toad alive, Trevor searches for survivors while Kyle hunts the killer, and their paths lead them through an imperiled forest, a deadly pandemic, and a changing climate, finally intertwining at the site of the golden toad's last emergence deep in Monteverde's Bosque Eterno de Los Niños. The toad's demise becomes a haunting foretelling of approaching ecological crisis, but with a gold lining on the horizon. *The Golden Toad* changes the conversation around extinction, climate change, and conservation while exploring environmental grief, resurrection, and hope in a changing world.
