Postle,2020-05-27

Essentials of Cognitive Neuroscience introduces and explicates key principles and concepts in cognitive neuroscience in such a way that the reader will be equipped to critically evaluate the ever growing body of findings that the field is generating For some students this knowledge will be needed for subsequent formal study and for all readers it will be needed to evaluate and interpret reports about cognitive neuroscience research that make their way daily into the news media and popular culture The book seeks to do so in a style that will give the student a sense of what it s like to be a cognitive neuroscientist when confronted with a problem how does one proceed How does one read and interpret research that s outside of one s sub area of specialization How do two scientists advancing mutually incompatible models interrelate Most importantly what does it feel like to partake in the wonder and excitement of this most dynamic and fundamental of sciences *Illusions of Human Thinking* Gabriel Vacariu,2015-10-19 The book illustrates that the traditional philosophical concept of the Universe the World

has led to anomalies and paradoxes in the realm of knowledge The author replaces this notion by the EDWs perspective i e a new axiomatic hyperontological framework of Epistemologically Different Worlds EDWs Thus it becomes possible to find a more appropriate approach to different branches of science such as cognitive neuroscience physics biology and the philosophy of mind The consequences are a better understanding of the mind body problem quantum physics non locality or entanglement the measurement problem Einstein s theory of relativity and the binding problem in cognitive neuroscience

The Boundaries of Consciousness: Neurobiology and Neuropathology Steven Laureys,2006-08-24 Consciousness is one of the most significant scientific problems today Renewed interest in the nature of consciousness a phenomenon long considered not to be scientifically explorable as well as increasingly widespread availability of multimodal functional brain imaging techniques EEG ERP MEG fMRI and PET now offer the possibility of detailed integrated exploration of the neural behavioral and computational correlates of consciousness The present volume aims to confront the latest theoretical insights in the scientific study of human consciousness with the most recent behavioral neuroimaging electrophysiological pharmacological and neuropathological data on brain function in altered states of consciousness such as brain death coma vegetative state minimally conscious state locked in syndrome dementia epilepsy schizophrenia hysteria general anesthesia sleep hypnosis and hallucinations The interest of this is threefold First patients with altered states of consciousness continue to represent a major clinical problem in terms of clinical assessment of consciousness and daily management Second the exploration of brain function in altered states of consciousness represents a unique lesional approach to the scientific study of consciousness and adds to the worldwide effort to identify the neural correlate of consciousness Third new scientific insights in this field have major ethical and social implications regarding our care for these patients

What Can Neuroscience Learn from Contemplative Practices? Zoran Josipovic,Bernard J. Baars,2016-09-22 A recent wave of brain research has advanced our understanding of the neural

mechanisms of conscious states contents and functions A host of questions remain to be explored as shown by lively debates between models of higher vs lower order aspects of consciousness as well as global vs local models Baars 2007 Block 2009 Dennett and Cohen 2011 Lau and Rosenthal 2011 Over some twenty five centuries the contemplative traditions have also developed explicit descriptions and taxonomies of the mind to interpret experiences that are often reported in contemplative practices Radhakrishnan Rinbochay reflexivity or self knowing associated with consciousness the sense of self and consciousness and aspects of consciousness that are said to continue during sleep These real or claimed aspects of consciousness have not been fully integrated into scientific models so far This Research Topic in Consciousness Research aims to provide a forum for theoretical proposals new empirical findings integrative literature reviews and methodological improvements inspired by meditation based models We include a broad array of topics including but not limited to replicable findings from a variety of systematic mental practices changes in brain functioning and organization that can be attributed to such practices their effects on adaptation and neural plasticity measurable effects on perception cognition affect and self referential processes We include contributions that address the question of causal attribution Many published studies are correlational in nature because of the inherent difficulty of conducting longitudinal experiments based on a major lifestyle decision such as the decision to commit to a mental practice over a period of years We also feature clinical and case studies integrative syntheses and significant opinion articles

God and the Secular Legal System Rafael Domingo, 2016-09-29 This timely book offers a theistic approach to secular legal systems and demonstrates that these systems are neither agnostic nor atheist Critical but succinct in its approach this book focuses on an extensive range of liberal legal approaches to religious and moral issues and subjects them to critical scrutiny from a secular perspective Expertly written by a leading scholar the author offers a rare combination of profundity of ideas and simplicity of expression It is a ringing defense of the theistic conception of secular legal systems and an uncompromising attack on the agnostic and atheist conception

Extreme Religious Behaviours Johannes Bronkhorst, 2024-06-17 Certain religious behaviours clearly reduce biological fitness These behaviours include celibacy along with various forms of asceticism and rituals that harm the performer Such behaviours are found in widely different cultures How is this possible This book shows that these behaviours as is religion in general are by products of features of the human mind whose evolutionary fitness is beyond doubt and explores those features Which are those features This book proposes a twofold answer It draws attention to the layered nature of human consciousness in which different manners of experience are superimposed on each other This goes a long way toward accounting for the universal religious belief in some kind of transcendental world a higher reality different from ordinary reality The layering of consciousness comes about in childhood and gains in prominence with the acquisition of a first language which is the second feature highlighted in this book Together these features explain a variety of normal religious behaviours and beliefs and account for the possibility of mystical experience They also explain the occurrence of behaviours

that do not augment evolutionary fitness **Volpe's Neurology of the Newborn E-Book** Joseph J. Volpe, Terrie E. Esperienze dell'aldilà messe a confronto* Giulia Sergio, 2018-08-01 L'idea che l'uomo abbia un'anima che sopravvive vecchia come il mondo ma se i racconti sull'aldilà da sempre accompagnano il genere umano solo di recente le NDE esperienze di morte temporanea li hanno portati all'attenzione del grande pubblico e della scienza La maggior parte di noi per non ha avuto esperienze trascendentali una visione un'apparizione una NDE di conseguenza per ritenere accettabile quello che ci viene detto bisogna che provenga da qualcuno di credibile e sano di mente Occorre anche che ci siano altri in grado di offrire testimonianze simili o uguali per metterle a confronto e cercare di capire cosa c'è aldilà di questa vita e di questa realtà The idea we have a surviving soul is as old as the world but if tales of the afterlife have always accompanied mankind only recently NDEs experiences of temporary death brought them to attention of great audiences and science Most of us however have not had transcendental experiences a vision an apparition an NDE and in order to accept what we are told it must come from someone credible and sane There must also be others able to offer similar or identical testimonies to compare them and try to understand what lies beyond this life and this reality **Neurociências e Saúde Mental: Da Essência ao Contexto** Antônio Ferreira de Macedo, Vivemos numa época em que já poucos mistérios persistem mas talvez dois ainda suscitem o nosso fascínio e interesse em transcender as

fronteiras do conhecimento que limitam a sua compreensão. Um o macrocosmo dos corpos celestes do universo e do espaço infinitamente grande. O outro o microsistema do nosso cérebro contido na nossa cabeça, mas que também encerra galáxias de complexidade no intrincado funcionamento molecular das suas células e no pulsar elétrico dos seus neurônios. Este é o que o autor é autor de todos os nossos pensamentos, emoções, sonhos e planos está tão perto afinal todos temos um, mas tão longe do nosso completo entendimento. Por isso o cérebro o protagonista deste livro que nos convida e desafia para uma digressão conceptual que não tem ponto de partida nem de chegada, antes constitui um percurso polissêmico que suscita mais questões do que respostas.

Mediation and Immediacy Jenny Ponzio, Robert A. Yelle, Massimo Leone, 2020-12-07. Religion like any other domain of culture is mediated through symbolic forms and communicative behaviors which allow the coordination of group conduct in ritual and the representation of the divine or of tradition as an intersubjective reality. While many traditions hold out the promise of immediate access to the divine or to some transcendent dimension of experience, such promises depend for their realization as well on the possibility of mediation which is necessarily conducted through channels of communication and exchange such as prayers or sacrifices. An understanding of such modes of semiosis is therefore necessary even and especially when mediation is denied by a tradition in the name of the ineffability of the deity or of mystical experience. This volume models and promotes an interdisciplinary dialogue and cross-cultural perspective on these issues by asking prominent semioticians, historians of religion, and of art, linguists, sociologists of religion, and philosophers of law to reflect from a semiotic perspective on the topic of mediation and immediacy in religious traditions.
