Ocular Therapeutics And Drug Delivery Ocular Therapeutics And Drug Delivery:

Ocular Therapeutics and Drug Delivery Indra K. Reddy, 1995-12-12 Since ocular therapeutics and drug delivery is a subject of interest to specialists from various disciplines such as chemical biochemical medical pharmaceutical and toxicological it truly presents a unique situation requiring a multi disciplinary approach in understanding and addressing various problems Yet we see that scientists associated with these areas are working by and large independently of one another thus limiting dissemination of knowledge experience and ideas that would greatly enhance the overall progress in this area of research Regrettably the information currently available in ocular therapeutics and drug delivery though extensive is still fragmented into various disciplines making meaningful synthesis difficult Several books are available that cover one or two aspects of the multi disciplinary fields on an individual basis however none is available that covers all of them The chapters contained in this book are specific to various interrelated areas of ocular therapeutics and drug delivery and are written by acknowledged experts from both academia and industry The book itself is divided into five parts namely I overview basic principles and methodology II pathopharmacology and clinical applications III chemical biochemical approaches to ocular drug delivery IV formulation and drug delivery considerations and V industrial and regulatory considerations Individual chapters in each section apart from presenting a concise text entail an extensive listing of references **Ocular Therapeutics** Ashok

Garg, 2013-03-31 The third edition of Ocular Therapeutics brings practitioners up to date with the latest advances in ophthalmic drugs Divided into three sections the book begins with discussion on the physiology of the eye drug administration and the fundamental role of ocular therapeutics The second section examines the application of ocular therapeutics in ophthalmic surgery for many different disorders and the final section discusses recent advances and future developments This new edition has been fully updated with the addition of new drugs and delivery systems covering all groups of drugs used worldwide in different clinical conditions of the eye Written by recognised international experts many from the USA the book is presented in an easy to read format and includes nearly 430 well illustrated colour figures tables flow diagrams and chemical formulas Key points New edition bringing ophthalmologists up to date with latest advances in ophthalmic drugs Includes new drugs and delivery systems for all groups of drugs used worldwide Written by recognised international experts Nearly 430 figures tables flow diagrams and chemical formulas Previous edition published in 2006

Update on Polymers for Ocular Drug Delivery Atish S Mundada,2011-12-20 The eye is the most easily accessible site for topical administration of a medication Drugs are commonly applied to the eye for localised action on the surface or in the interior of the eye A major problem in ocular therapeutics is the attainment of an optimal drug concentration at the site of action Poor bioavailability of drugs from ocular dosage forms is mainly due to the precorneal loss factors which include tear dynamics non productive absorption transient residence time in the cul de sac and the relative impermeability of the corneal epithelial membrane Due to these physiological and anatomical constraints only a small fraction of the drug effectively 1% or even less of the instilled dose is ocularly absorbed The effective dose of medication administered ophthalmically may be altered by increasing the retention time of medication in contact with the surface of the eye To date Pharmaceutical Technologists have tried to develop different novel formulations like gel ocular inserts collagen shields implants liposomes nanoparticles penetration enhancers and in situ gelling systems in order to increase the bioavailability and duration of the therapeutic action of ocular drugs and polymers plays an important role in all these approaches This book provides detailed information regarding all such polymers which have been used and shown to be excellent in improving the bioavailability of ocular drugs

Nanocarriers for Ocular Therapeutics Gaurav Kumar Jain,Roop K Khar,Farhan J Ahmad,2010-10 Ocular drug delivery is one of the most interesting and challenging endeavours because the anatomy and physiology of the eye render this organ exquisitely impervious to foreign substances including drugs Conventional ocular formulations are no longer adequate and currently nanocarriers for delivering drugs to the eye is emerging as an important area of drug delivery research This book therefore focuses on PLGA chitosan Nanoplexes as novel nanocarriers for ocular therapeutics The development of Nanoplex carriers their uptake mechanism and interaction with ocular surface and their use for the treatment of ocular keratitis are discussed The results should help shed some light on the use of these novel nanocarriers for ocular therapeutics and should be especially useful to researchers or scientists working in the field of nanotechnology and drug delivery pharmaceutical companies dealing with ocular therapeutics and upto some extent to professionals associated with health care
