Optimizing Wireless Communication Systems Francisco Rodrigo Porto Cavalcanti, Sören Andersson, 2009-07-31. In June 2000, GTEL Wireless Telecommunications Research Group at the Federal University of Ceara was founded by Professor Rodrigo Cavalcanti and his colleagues with the mission of developing wireless communications technology and impact the development of the Brazilian telecommunications sector. From the start, this research effort has been supported by Ericsson Research, providing a dynamic environment where academia and industry together can address timely and relevant research challenges. This book summarizes much of the research output that has resulted from GTEL's efforts. It provides a comprehensive treatment of the physical and multiple access layers in mobile communication systems, describing different generations of systems but with a focus on 3G systems. The team of Professor Cavalcanti has contributed scientifically to the development of this field and built up an impressive expertise. In the chapters that follow, they share their views and knowledge on the underlying principles and technical trade-offs when designing the air interface of 3G systems. The complexity of 3G systems and the interaction between the physical and multiple access layers present a tremendous challenge when modeling, designing, and analyzing the mobile communication system. Herein, the authors tackle this problem in an impressive manner. Their work is very much in line with the developments in 3GPP, providing a deeper understanding of the evolution of 3G and also future enhancements.

Communications Systems Tho Le-Ngoc,Ahmed Masmoudi,2017-07-02 This book introduces the development of self interference SI cancellation techniques for full duplex wireless communication systems The authors rely on estimation theory and signal processing to develop SI cancellation algorithms by generating an estimate of the received SI and subtracting it from the received signal The authors also cover two new SI cancellation methods using the new concept of active signal injection ASI for full duplex MIMO OFDM systems The ASI approach adds an appropriate cancelling signal to each transmitted signal such that the combined signals from transmit antennas attenuate the SI at the receive antennas The authors illustrate that the SI pre cancelling signal does not affect the data bearing signal This book is for researchers and professionals working in wireless communications and engineers willing to understand the challenges of deploying full duplex and practical solutions to implement a full duplex system Advanced level students in electrical engineering and computer science studying wireless communications will also find this book useful as a secondary textbook **Wireless**
