Meteorite Craters And Impact Structures Of The Earth:

Meteorite Craters and Impact Structures of the Earth Paul W. Hodge,1994-08-04 The essential guide to 139 sites where the Earth has had a direct hit from space **Meteorite Craters** Kathleen Mark,1995-09-01 The scientific community has argued for decades over the origin of giant craters on the earth In a highly readable fashion Kathleen Mark recounts the fascinating detective story of how scientists came to recognize meteorite craters both ancient and relatively recent

Terrestrial Impact Structures Jacquelyn Hester Freeberg,1966 This bibliography lists 110 features for which origin by meteoritic impact has been suggested and gives a comprehensive group of references for each feature Annotations for the more significant contributions to the literature are included The structures are divided into six categories and their geographic locations are indicated on a sketch map *Meteor Craters* Yves Earhart,AI,2025-02-11 Meteor Craters explores the profound role of asteroid impacts in shaping Earth's geological history Diving into impact events as fundamental geological processes the book reveals how these collisions have influenced our planet's surface atmosphere and even the course of biological evolution Readers will discover how shockwave propagation sculpts the landscape and learn to distinguish impact craters from other geological formations through remote sensing and mineral analysis The book emphasizes that understanding these events is crucial for deciphering Earth's past and assessing future geological hazards Beginning with an overview of the solar system the book progresses through the physics of high velocity impacts and the stages of crater formation It highlights intriguing facts like the connection between impact events and mass extinctions and the potential for impacts to create valuable mineral deposits The book uniquely integrates detailed geological analyses with broader considerations of Earth's evolution making it an invaluable resource for students science enthusiasts and anyone curious about cosmic collisions **Large Meteorite Impacts and Planetary Evolution VI** Wolf Uwe Reimold,Christian Koeberl,2021-09-23 This volume contains a sizable suite of contributions dealing with regional impact records Australia Sweden impact craters and impactites early Archean impacts and geophysical characteristics of impact structures shock metamorphic investigations post impact hydrothermalism and structural geology and morphometry of impact structures on Earth and Mars **The Manson Impact Structure, Iowa** Christian Koeberl,Raymond R. Anderson,1996 Twenty two reports presenting results from the investigation samples of the Manson impact structure a crater site in Iowa that was not discovered until 1992 The reports cover a great deal of ground including geophysical studies of the crater structure detailed mineralogical petrological and ge **Australia's Meteorite Craters** Kenneth McNamara,2010-01-01 On Earth catastrophic impact of an asteroid or comet with truly global consequences has not happened during our written history and the threat seems very small Giant scars on our planet's surface are relics of an impact history stretching back more than 2 billion years and there is no assurance it cannot happen again In Australia there are 36 structures ranging from tens of metres to tens of kilometres in diameter and recognised to varying degrees of certainty as having been formed by giant meteorite impact In

clear and concise language this book begins with ancient beliefs and myths about craters and then explains how they are actually formed and provides details of their structure Using the record in the rocks the authors also assess the likelihood of future impacts and their possible effects **Asteroids Impacts, Crustal Evolution and Related Mineral Systems with Special Reference to Australia** Andrew Y. Glikson, Franco Pirajno, 2018-03-12 This book presents a comprehensive overview of Australian impact structures and related mineralization including a discussion of the significance of many of these structures for crustal evolution The book focuses in particular on Archaean impact ejecta fallout units in the Pilbara Craton of Western Australia large exposed and buried impact structures and on the geophysical evidence for possible to probable impact structures Thanks to their long term geological stability Precambrian and younger terrains in the Australian continent contain 38 confirmed impact structures and 43 ring and dome structures many of which constitute possible to probable asteroid impact structures The impact structures have been the subject of more than half a century of studies and range from several tens of meter large craters to buried structures larger than 100 km in diameter Discoveries of impact fallout units in the Pilbara Craton have defined the Pilbara as one of the two best documented terrains where Archaean impact ejecta fallout deposits are identified the other terrain being the Kaapvaal Craton in southern Africa A synthesis of evidence from both cratons indicates periods of large asteroid bombardments during 3 47 2 48 billion years ago including peak bombardment about 3 25 3 22 billion years ago The latter period coincides with an abrupt transformation of an early Archaean granite greenstone crust to mid to late Archaean semi continental crustal regimes underpinning the significance of heavy asteroid impact events for crustal evolution Apart from proven impact structures Australian terrains display a range of circular features including morphological and drainage rings circular lakes volcanic craters tectonic domes oval granite bodies mafic igneous plugs salt diapirs and magnetic gravity and seismic anomalies many of which are of a likely impact origin Thermal and hydrothermal processes associated with impact cratering bear important consequences for the formation of mineral deposits such as Ni at Sudbury Pb Zn at Siljan and Kentland Impact structures may also provide sites for the accumulation of hydrocarbons whereas in some instances fracturing associated with impact structures allows outward migration of oil and gas **Terrestrial Impact Structures** Jacquelyn H. Freeberg, Robert James Dingman, Saville Cyrus Creasey, 1966 A description of the stratigraphy structure and petrology of the rocks in an area that contains deposits of copper tungsten and gold *The Geology of the Arab World--An Overview* Abderrahmane Bendaoud, Zakaria Hamimi, Mohamed Hamoudi, Safouane Djemai, Basem Zoheir, 2018-09-21 This book is the result of the work of the first international congress of the ArabGU Arabian Geosciences Union which took place in Algiers Algeria in February 2016 It presents research articles and review papers on geology of the North Africa and Arabian Middle East It provides information to the public on various fields of earth sciences and encourages further research in this field in order to attract an international audience **Impact Craters in South America** Rogelio Daniel Acevedo, Maximiliano C. L. Rocca, Juan Federico Ponce, Sergio G.

Stinco,2015-04-25 A complete and updated catalogue of impact craters and structures in South America from 2014 is presented here Approximately eighty proven suspected and disproven structures have been identified by several sources in this continent All the impact sites of this large continent have been exhaustively reviewed the proved ones the possible ones and some very doubtful Many sites remain without a clear geological in situ confirmation and some of them could be even rejected Argentina and Brazil are leading the list containing almost everything detected In Bolivia Chile Colombia Guyana Paraguay Per Uruguay and Venezuela only a few were observed Only Ecuador is waiting for new discoveries So far the largest well stated impact site is still the Araguainha structure in Brazil with its 40 kilometers in diameter However two possible impact structures are larger than Araguainha Malvinas with 250 kilometers in diameter and Vichada in Colombia 50 kilometers This study also reports the existence of some Tertiary Quaternary glassy impactite layers the escorias and tierras cocidas of the pampas in Argentina

Hazards Due to Comets and Asteroids Tom Gehrels,2021-11-30 In 1993 the U S Department of Defense declassified information dealing with frequent explosions in the upper atmosphere caused by meteoric impact It is estimated that impacts have occurred of a magnitude equivalent to the atomic bomb detonated at Hiroshima Not all such space voyagers meet their end in the atmosphere however huge craters attest to the bombardment of earth over millions of years and a major impact may have resulted in the extinction of dinosaurs An impact in Siberia near the beginning of this century proves that such events are not confined to geologic time Hazards Due to Comets and Asteroids marks a significant step in the attempt to come to grips with the threats posed by such phenomena It brings together more than one hundred scientists from around the world who draw on observational and theoretical research to focus on the technical problems related to all aspects of dealing with these hazards searching for and identifying hazardous comets and asteroids describing their statistics and characteristics intercepting and altering the orbits of dangerous objects and applying existent technologies rocket boosters rendezvous and soft landing techniques instrumentation to such missions The book considers defensive options for diverting or disrupting an approaching body including solar sails kinetic energy impacts nuclear explosives robotic mass drivers and various propulsion systems A cataclysmic impact posing a threat to life on Earth is a possibility that tomorrow s technology is capable of averting This book examines in depth the reality of the threat and proposes practical measures that can be initiated now should we ever need to deal with it
