**Non-Natural Amino Acids**,2009-07-24 By combining the tools of organic chemistry with those of physical biochemistry and cell biology Non Natural Amino Acids aims to provide fundamental insights into how proteins work within the context of complex biological systems of biomedical interest The critically acclaimed laboratory standard for 40 years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike With more than 400 volumes published each Methods in Enzymology volume presents material that is relevant in today s labs truly an essential publication for researchers in all fields of life sciences Demonstrates how the tools and principles of chemistry combined with the molecules and processes of living cells can be combined to create molecules with new properties and functions found neither in nature nor in the test tube Presents new insights into the molecular mechanisms of complex biological and chemical systems that can be gained by studying the structure and function of non natural molecules Provides a one stop shop for tried and tested essential techniques eliminating the need to wade through untested or unreliable methods

**MicroRNA Methods** John J. Rossi,2007-08-30 MicroRNAs miRNA are tiny bits of genetic material that were unknown nearly 10 years ago but now represent an exciting field of study in biology Upon their discovery researchers revealed for the first time a new mechanism by which microRNA can stop the function of messenger RNA mRNA by literally cutting it in half interfering with the normal function of specific messenger RNAs in gene expression This expression of genes that code for essential proteins is essentially what controls whether a cell turns into a liver lung or brain cell for example Understanding what activates this process or stops it is a key to understanding the biological process and builds a foundation for advances in medicine and other fields This volume in Methods in Enzymology presents valuable methods for studying MicroRNA with three sections covering identification of MicroRNAs and their targets MicroRNA expression maturation and functional analysis and MicroRNAs and disease
