and monitor motivational and emotional as they develop during ongoing intergroup interactions thus enabling the empirical investigation of the fundamental biological bases of prejudice However several very promising strands of research have largely developed independently of each other By bringing together the work of leading prejudice researchers from across the world who have begun to study this field with different neuroscientific tools this volume provides the first integrated view on the specific drawbacks and benefits of each type of measure illuminates how standard paradigms in research on prejudice and intergroup relations can be adapted for the use of neuroscientific methods and illustrates how different methodologies can complement each other and be combined to advance current insights into the nature of prejudice This cutting edge volume will be of interest to advanced undergraduates graduates and researchers students who study prejudice intergroup relations and social neuroscience

socially undesirable responses This book also presents innovative combinations of multiple methodologies including behavioral experiments computer modeling functional Magnetic Resonance Imaging fMRI experiments Event Related Potential ERP experiments and brain lesion studies It is divided into four sections The first three sections present the latest research on respectively understanding and representing other people representing social groups and the interplay of cognition and emotion in social regulation In the fourth section contributors step back and consider a range of novel topics that have emerged in the context of social neuroscience research understanding social exclusion as pain deconstructing our moral intuitions understanding cooperative exchanges with other agents and the effect of aging on brain function and its implications for well being Taken together these chapters provide a rich introduction to an exciting rapidly developing and expanding field that promises a richer and deeper understanding of the social mind
