

ENGINE PROPER

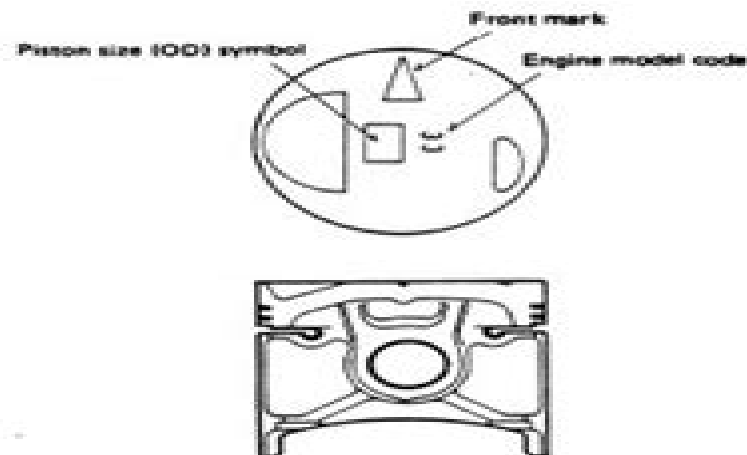

Main moving parts (4G52, 4G54)

Pistons, piston pins and piston rings

The piston is a solid single-piece casting of LO-EX metal, a heat-resistant aluminum alloy, and is shaped for greater rigidity. The pin is press-fitted into the small end of the connecting rod, and is slidably held by the piston, thus presenting a semi-floating pin arrangement. The pin axis is offset from the piston center.

Three special-cast-iron rings are used on the piston, two being compression rings and one being an oil ring. The top ring is of barrel type, second ring tapered face type and oil ring combined (three-piece) type.

All these rings have their sliding faces plated with hard chromium.

Piston profile and markings (4G33)
