Threats Without Enemies Gwyn Prins, 2013-11-05 The world is moving into a new era which will be dominated by a new range of threats and a new range of priorities Already headlines tell of storms and droughts mass emigrations the danger of old Soviet nuclear reactors and the thinning ozone layer and with the menaces of global warming deforestation pollution and loss of biodiversity the picture is likely to get bleaker Unlike traditional threats these are not made deliberately and standard military responses are usually inappropriate They are threats without enemies and they present quite new and fundamental challenges to the international community which has to find new methods and institutions as well as the resolve to tackle them In this book eminent experts describe the new threats and the scale of the dangers which they present and set out the political military and institutional changes needed Gwyn Prins is Director of the Global Security Programme at the University of Cambridge He is author of *Top guns* and *Toxic Whales* also published by Earthscan Progress For A Small Planet Three topics dominate discussions of the global environment pollution the consequences of the affluent running ever faster through finite resources and the growing tensions between rich and poor as a third of humanity continues to live and die in desperate poverty In this exceptional book Barbara Ward co author with Rene Dubos of the bestselling *Only One Earth* refused to see these processes as inevitable It describes new technologies for recycling waste for energy for getting more for less linking them to ordinary people's working lives It also suggests a strategy for meeting the basic needs of the disadvantaged and shows how the vast inequalities between countries can be reduced This perceptive survey of policies outlines a planetary bargain between the world's nations that would guarantee individual freedom from poverty and keep our shared biosphere in good working order Originally published in 1993

Conventions, Treaties And Other Responses To Global Issues - Volume II Gabriela Maria Kutting, 2009-08-25

Conventions Treaties and other Responses to Global Issues is a component of Encyclopedia of Institutional and Infrastructural Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias This theme Conventions Treaties and other Responses to Global Issues deals with the issue of international resource regimes These are formal responses by states to the threats posed by trans boundary pollution or the distribution of resources In the past thirty years the number of international environmental agreements has steadily risen to reach record numbers and these agreements have secured a firm place in the hierarchy of international affairs There is a loose assumption that this is a good thing and that this rise has resulted in a commensurable improvement in environmental protection and resource allocation But is this actually the case In fact is there a positive correlation at all Or are there negative correlations What are the connections between environmental diplomacy and environmental protection and how can environmental protection be achieved These are just a few of the questions that will be addressed in this theme whilst at the same time giving an overview of the most important international resource regimes and the most influential international organizations having an environmental impact The theme takes the following shape the first section introduces issues of

international environmental law and its history showing that international law can take many different forms Here we explain what policy tools states have in drafting responses to global environmental issues The second section deals with the most prominent international environmental agreements and gives a state of the art overview of existing regimes The third and last section of this theme introduces the key actors in the international arena besides states such as international organizations and civil society actors such as pressure groups These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

International Environmental Governance PeterM. Haas,2017-07-05 International Environmental Governance reviews the contentious approaches to addressing global and transboundary environmental threats The volume collects together the most influential and important literature on the major political approaches to dealing with these problems their histories major debates and research frontiers It is accompanied by a substantial introduction which reviews the evolution of the academic contribution to environmental governance focusing on a wide array of international environmental problems

Between Peril and Promise J. Martin Rochester,2011-11-08 In this concise introduction to international law students gain a clear appreciation for how politics shapes the development of international law and how international law shapes political relations between states Throughout the book Rochester takes this complex subject and makes it accessible with his vibrant easy to read prose

International Environmental Law, Policy, and Ethics Alexander Gillespie,2014-08-21 This second edition of International Environmental Law Policy and Ethics revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the

notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy
