Mission Adaptive Display Technologies and Operational Decision Making in Aviation Smith, Kevin M., Larrieu, Stéphane, 2015-08-04 Avionics often serves as the tip of the spear for research into user interface and systems usability in aviation. However, this emphasis on flashy technology-driven design can come with a cost: the sacrifice of practical utility, which in the high-stakes environment of military aviation can lead directly to catastrophe. *Mission Adaptive Display Technologies and Operational Decision Making in Aviation* explores the use of adaptive and assistive technologies in aviation to establish clear guidelines for the design and implementation of such technologies to better serve the needs of both military and civilian pilots. Benefiting from the authors' combined experience of more than 40 years in the aviation industry and over 25 000 flight hours, this volume targets a wide audience of engineers and business professionals. This premier reference source covers topics of interest to aviators and engineers, including aerodynamic systems design, operational decision theory, user interface design, avionics, and concepts and cases in flight operations, mission performance, and pilot training.

Cognition, Assessment and Debriefing in Aviation Wolff-Michael Roth, 2017-07-20 Debriefing is a major component of the job in many high-risk industries where errors can have considerable, often deadly, consequences, including combat, surgery, and aviation. Although there exists considerable literature on debriefing, recent reviews of the literature suggest shortcomings in the topics researched: b) paucity of related theory; c) limitations in the number of empirical studies; and d) problems in research design. There are also recent suggestions that there are surprisingly few studies in the scholarly literature that show how to debrief, how to teach or learn to debrief, what methods of debriefing exist, and how effective they are at achieving learning objectives and goals. Meta-analyses reveal substantial variations in research findings, e.g., on the use of video as a means of debriefing that can be traced to the problems. This book redresses these problems in that it provides a detailed look at debriefing and assessment: the functions of different cognitive artifacts used and a theoretical framework that accounts for the complexity of flying an aircraft and for the debriefing of the pilots' experiences, especially under the high-stakes condition of their bi-annual evaluation for licensing purposes. The book provides a detailed investigation of flight examiners' methods to arrive at assessments of aviation pilot performance. It shows and theoretically models why there are good reasons for lower than desired inter-rater agreements. It offers detailed scenarios of how debriefing can be made to draw maximum benefit for pilot learning. That is for the take-home messages that will make them better pilots. The theoretical framework includes objective factors that determine performance and the subjective experience pilots have while undergoing training and testing in flight simulators. *Recent Advancements in Airborne Radar Signal Processing: Emerging Research and Opportunities* Almslmany, Amir, 2018-06-01 As computer and information systems technology advances, industries such as aviation stand to benefit from the overwhelming new advances in hardware, software, and best practices. Advances in Human Aspects of Aviation Steven J. Landry,2012-07-11 Since the very earliest years of aviation it was clear that human factors were critical to the success and safety of the system As aviation has matured the system has become extremely complex Bringing together the most recent human factors work in the aviation domain *Advances in Human Aspects of Aviation* covers the design of aircrafts for the comfort and well being of the passenger The book discusses strategies and guidelines for maximizing comfort the design of aircrafts including cockpit design and the training and work schedules for flight attendants and pilots It is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment but as embedded issues that can only be understood as a part of an overall system In keeping with a system that is vast in its scope and reach the chapters in this book cover a wide range of topics including Interface and operations issues from the perspectives of pilots and air traffic controllers respectively Specific human performance issues studied from within the context of the air transportation system Issues related to automation and the delineation of function between automation and human within the current and future system The U S air traffic modernization effort called NextGen Diverse modeling perspectives and methods Safety and ethics as driving factors for

change Cognition and work overload Empirical research and evaluation of the air transportation domain As air traffic modernization efforts begin to vastly increase the capacity of the system the issues facing engineers scientists and other practitioners of human factors are becoming more challenging and more critical Reflecting road themes and trends in this field the book documents the latest research in this area **AGARD Index of Publications** North Atlantic Treaty Organization. Advisory Group for Aerospace Research and Development,1995 Situational Awareness Aaron S. Dietz,2017-07-05 Situational awareness has become an increasingly salient factor contributing to flight safety and operational performance and the research has burgeoned to cope with the human performance challenges associated with the installation of advanced avionics systems in modern aircraft The systematic study and application of situational awareness has also extended beyond the cockpit to include air traffic controllers and personnel operating within other complex high consequence work domains This volume offers a collection of essays that have made important contributions to situational awareness research and practice To this end it provides unique access to key readings that address the conceptual development of situational awareness methods for its assessment and applications to enhance situational awareness through training and design **Research and Technology Program Digest** United States.
