5 2008 for mirrorless interchangeable lens digital cameras and camcorders design and development However unlike the  
preceding Four Thirds System it is not an open standard MFT shares the original image sensor size and specification with the  
Four Thirds system designed for DSLRs Unlike Four Thirds the MFT system design specification does not provide space for a  
mirror box and a pentaprism allowing smaller bodies to be designed and a shorter flange focal distance and hence smaller  
lenses to be designed Virtually any lens can be used on MFT camera bodies as long as an adapter exists For instance Four  
Third lenses can be used with auto focus using the adapters designed by Olympus and Panasonic Drawing showing the  
relative sizes of sensors used in most current digital cameras relative to a 35mm film frame The image sensor of Four Thirds  
and MFT is commonly referred to as a 4/3 type or 4/3 type sensor inch based sizing system is derived from now obsolete  
video camera tubes The sensor measures 18 mm x 13.5 mm 22.5 mm diagonal with an imaging area of 17.3 mm x 13.0 mm  
21.6 mm diagonal comparable to the frame size of 110 film Its area ca 220 mm<sup>2</sup> is approximately 40% less than the APS C  
sensors used in other manufacturers DSLRs yet is around 9 times larger than the 1/2.5 sensors      *Instruction Manual for
