Harrison Hsieh, 2023-03-06 **Ontogeny and Phylogeny of Brain Barrier Mechanisms** Norman R Saunders, Helen B Stolp, Shane A Liddelow, 2016-04-15 The brain functions within an internal environment that is determined and controlled by morphological structures and cellular mechanisms present at interfaces between the brain and the rest of the body In vertebrates these interfaces are across cerebral blood vessels blood brain barrier choroid plexuses blood cerebrospinal fluid barrier and pia arachnoid There is a CSF brain barrier in the neuroepithelium lining the ventricular system that is only

present in embryos There is now substantial evidence that many brain barrier mechanisms develop early and that in some cases they are functionally more active and even more specialized compared to adult barriers Therefore barriers in developing brain should be viewed as adapted appropriately for the growing brain and not as is still widely believed immature Considerable advances in our understanding of these barrier mechanisms have come from studies of the developing brain and invertebrates A striking aspect to be highlighted in this special edition is that many of the molecular mechanisms in these very diverse species are similar despite differences in the cellular composition of the interfaces This Frontiers Topic comprises articles in three sections Original studies Reviews and Myths Misconceptions Original articles provide new information on molecular and cellular barrier mechanisms in developing brains of primates including human embryos Brchner et al Ek et al Errede et al rodents Bauer et al Liddelow Strazielle Ghersi Egea Saunders et al Whish et al chick Bueno et al and zebrafish Henson et al as well as studies in drosophila Hindle Bainton De Salvo et al Limmer et al The Reviews section includes evolutionary perspectives of the blood brain and blood CSF barriers Bueno et al Bill Korzh There are also detailed reviews of the current state of understanding of different interfaces and their functional mechanisms in developing brain Bauer et al Strazielle Ghersi Egea Liddelow Richardson et al Errede et al Henson et al Brchner et al and in invertebrates Hindle Bainton De Salvo et al Limmer et al Different aspects of the relationship between properties of the internal environment of the brain and its development are discussed Stolp Molnar Johansson Prasongchean et al A neglected area namely barriers over the surface of the brain during development is also covered Brchner et al Clinically related perspectives on barrier disruption in neonatal stroke are provided by Kratzer et al and other aspects of dysfunction by Morretti et al and by Palmeta et al on the continuing problem of bilirubin toxicity Progress in this field is hampered by many prevailing myths about barrier function combined with methodologies that are not always appropriately selected or interpreted These is covered in the Misconceptions Myths and Methods section including historical aspects and discussion of the paracellular pathway a central dogma of epithelial and endothelial biology Saunders et al and a review of markers used to define brain barrier integrity in development and in pathological conditions Saunders et al Use of inappropriate markers has caused considerable confusion and unreliable interpretation in many published studies Torbett et al deal with the complexities of the new field of applying proteomics to understanding blood brain barrier properties as do Huntley et al with respect to applying modern high throughput gene expression methods Huntley et al The Editorial summarizes the contributions from all authors This includes mention of some the main unanswered but answerable questions in the field and what the impediments to progress may be

*Beneficial Microbes Alleviate Climatic Stresses in Plants* Ying Ma, Miroslav Vosátka, Helena Freitas, 2019-07-30 This Research Topic addresses the mechanisms by which beneficial soil microbes such as fungi and bacteria protect their host plant from climatic stresses that are increasing due to climate change We will highlight

- 1 recent progress in fundamental research
- 2 applied studies aimed at promoting sustainable agriculture and environmental

remediation and 3 emerging biotechnologies that promote crop adaptation to climate change Plants respond to various climatic stresses such as drought salinity elevated CO<sub>2</sub> and extreme temperatures These responses induce changes at the molecular cellular and physiological levels that restrict the establishment growth and development of the plant Understanding these changes has become an important research goal due to concerns about the adverse effects of climatic stresses on agriculture sustainability global food security and even plant based remediation technologies Some beneficial soil microorganisms such as arbuscular mycorrhizal fungi and plant growth promoting bacteria are able to protect and promote the growth of their host plants by acting as bioprotectants via induced systemic resistance biopesticides via antibiotic functions and phytostimulators via triggering hormonal signaling networks Plant adaptation to various climatic stresses is dynamic and involves complex cross talk within the regulatory network e g transcription factors kinase cascades and signaling molecules However the detailed molecular cellular and physiological mechanisms underlying plant beneficial microbe interactions in climatic stress adaptation remain largely unknown

*Metallomics* Yasumitsu Ogra, Takafumi Hirata, 2017-03-01 This book focuses on recent topics in metallomics a study of the metallome or metal containing biomolecules Metals can induce various physiological and toxicological effects in a very small amounts in other words the concentrations of biometals are very low in organisms Thus analytical techniques for a trace amount of metal are crucial to understand the biological and toxicological functions of metals This volume begins with an overview of metallomics including the history and development of the field Subsequent parts provide basic and advanced techniques for metallomics Speciation and imaging of metals are basic approaches to reveal the function of the metallome The applications of speciation using an HPLC hyphenated with inductively coupled plasma mass spectrometry LC ICP MS and flow cytometry ICP MS are described As advanced approaches the applications using a micro flow injection ICP MS an ICP triple quadrupole mass spectrometer an ICP sector field mass spectrometer and an ICP multi collector mass spectrometer are mentioned For the imaging of metals basic principles and applications of several techniques such as scanning X ray fluorescence microscopy and ICP MS equipped with laser ablation LA ICP MS are presented Speciation analyses using electrospray ionization mass spectrometry ESI MS X ray Absorption Spectroscopy XAS and nuclear magnetic resonance spectroscopy NMR are also introduced The last part highlights the medical and pharmaceutical applications of metallomics Molecular biological approaches to reveal the effects of toxic metals metal functions in brain and neurodegenerative diseases and metallodrugs are explained The topic of metal transporters is also presented
