**On Communicating** Klaus Krippendorff, 2010-07 Klaus Krippendorff is an influential figure in communication studies widely known for his award winning book Content Analysis. Over the years Krippendorff has made important contributions to the ongoing debates on fundamental issues concerning communication theory, epistemology, methods of research, critical scholarship, second order cybernetics, the social construction of reality through language, design and meaning. On Communicating assembles Krippendorff's most significant writings, many of which are virtually unavailable today, appearing in less accessible publications, conference proceedings, out of print book chapters and articles in journals outside the communication field. In their totality they provide a goldmine for communication students and scholars. Edited and with an introduction by Fernando Bermejo, this book provides readers with access to Krippendorff's key works. *Fulbright Labyrinths* Virginia Hall-Milhouse, 2011-11-28 In this provocative work Virginia Milhouse demonstrates how autoethnography combines creative and analytical practices to help bring to consciousness some complex social and political agendas hidden in narratorial writings It demonstrates how an arts based qualitative research method narrative inquiry can be fused with a scientific based quantitative method DMIS IDI and compliment support and or correct each other It also demonstrates how writing as a method of inquiry can be a viable way for researchers to learn about themselves and their research as well as features standards for evaluating creatively and analytically constructed text Further the author's examination of the aesthetics of inner readiness and in betweenness will be very helpful to people doing this kind of self reflexive fieldwork The reader will also appreciate this author's recognition of the importance of combining qualitative and quantitative methodologies something not many writers can do with great success Also this book will be a real contribution to sojourners and others traveling or living abroad The work is very smart and is beautifully and clearly written The labyrinth quote at the beginning of her work is very fitting and certainly promises to illustrate those words **Discourses in Action**

All data are the result of human actions whether by experimentations observations or declarations As such the presumption of knowing what data are about is subject to imperfections that can affect the validity of research efforts With calls for data based research comes the need to assure the reliability of generated data The reliability of converting texts into analyzable data has become a burning issue in several areas However this issue has been met by only a few limited and sometimes misleading measures of the extent to which data can be trusted as surrogates of the phenomena of analytical interests The statistic proposed by the author Krippendorff's Alpha is widely used in the social sciences not only where human judgements are involved but also where measurements are compared The Reliability of Generating Data expands on the author's seminal work in content analysis and develops methods for assessing the reliability of the kind of data that previously defied evaluations for this purpose It opens with a discussion of the epistemology of reliable data then presents the most basic alpha coefficient for the single valued coding of predefined units This largely familiar way of measuring reliability provides the platform for the succeeding chapters which start with an overview of alternative coefficients and then expand alpha one quality after another including to cope with the reliabilities of multi valued coding segmenting texts into meaningful units big data and information retrievals It also includes a chapter on how to diagnose and remedy imperfections and one on

applicable standards all converging on the statistical issues of the reliability of generating data Features Provides an overview of methods for assessing the reliability of generating data Expands a statistic proposed by the author already widely used in the social sciences Includes many easy to follow numerical examples to illustrate the measures Written to be useful to beginning and advanced researchers from many disciplines notably linguistics sociology psychometric and educational research and medical science
