Gastaldi,Giovanni Campardo,2020-05-11 This book presents a collection of lessons on various topics commonly encountered
in electronic circuit design including some basic circuits and some complex electronic circuits which it uses as vehicles to
explain the basic circuits they are composed of The circuits considered include a linear amplifier oscillators counters a digital
clock power supplies a heartbeat detector a sound equalizer an audio power amplifier and a radio The theoretical analysis
has been deliberately kept to a minimum in order to dedicate more time to a learning by doing approach which after a brief
review of the theory readers are encouraged to use directly with a simulator tool to examine the operation of circuits in a
virtual laboratory Though the book is not a theory textbook readers should be familiar with the basic principles of electronic
design and with spice like simulation tools To help with the latter aspect one chapter is dedicated to the basic functions and
commands of the OrCad P spice simulator used for the experiments described in the book
