**Architecture and Design for the Future Internet** Luis M. Correia, Henrik Abramowicz, Martin Johnsson, Klaus Wünnstel, 2011-01-06 Architecture and Design for the Future Internet addresses the Networks of the Future and the Future Internet focusing on networks aspects offering both technical and non technical perspectives It presents the main findings of 4WARD Architecture and Design for the Future Internet a European Integrated Project within Framework Programme 7 which addressed this area from an innovative approach Today s network architectures are stifling innovation restricting it mostly to the application level while the need for structural change is increasingly evident The absence of adequate facilities to design optimise and interoperate new networks currently forces a convergence to an architecture that is suboptimal for many applications and that cannot support innovations within itself the Internet 4WARD overcomes this

impasse through a set of radical architectural approaches built on a strong mobile and wireless background The main topics addressed by the book are the improved ability to design inter operable and complementary families of network architectures the enabled co existence of multiple networks on common platforms through carrier grade virtualisation for networking resources the enhanced utility of networks by making them self managing the increased robustness and efficiency of networks by leveraging diversity and the improved application support by a new information centric paradigm in place of the old host centric approach These solutions embrace the full range of technologies from fibre backbones to wireless and sensor networks

Innovative Research and Applications in Next-Generation High Performance Computing Hassan, Qusay F.,2016-07-05

High performance computing HPC describes the use of connected computing units to perform complex tasks. It relies on parallelization techniques and algorithms to synchronize these disparate units in order to perform faster than a single processor could alone. Used in industries from medicine and research to military and higher education, this method of computing allows for users to complete complex data intensive tasks. This field has undergone many changes over the past decade and will continue to grow in popularity in the coming years. Innovative Research Applications in Next Generation High Performance Computing aims to address the future challenges, advances and applications of HPC and related technologies. As the need for such processors increases, so does the importance of developing new ways to optimize the performance of these supercomputers. This timely publication provides comprehensive information for researchers, students in ICT program, developers, military and government organizations and business professionals.
