Nice Have Bacteria Won Human Frontiers:

Human Frontiers, Environments and Disease Anthony J. McMichael, 2001-06-28 A compelling account of the relentless trajectory of humankind across time and geography

Human Frontiers, Environments and Disease Tony McMichael, 2001-06-28 This compelling account charts the relentless trajectory of humankind and its changing survival and disease patterns across place and time from when our ancient ancestors roamed the African Savannah to today's populous industrialised globalising world This expansion of human frontiers geographic climatic cultural and technological has encountered frequent setbacks from disease famine and dwindling resources The social and environmental transformations wrought by agrarianism industrialisation fertility control social modernisation urbanisation and mass consumption have profoundly affected patterns of health and disease Today as life expectancies rise the planet's ecosystems are being damaged by the combined weight of population size and intensive economic activity Global warming stratospheric ozone depletion and loss of biodiversity pose large scale hazards to human health and survival Recognising this can we achieve a transition to sustainability This and other profound questions underlie this chronicle of expansive human activity social change environmental impact and their health consequences

Can Neuroscience Change Our Minds? Hilary Rose, Steven Rose, 2016-09-06 Neuroscience with its astounding new technologies is uncovering the workings of the brain and with this perhaps the mind The neuro prefix spills out into every area of life from neuroaesthetics to neuroeconomics neurogastronomy and neuroeducation With its promise to cure physical and social ills government sees neuroscience as a tool to increase the mental capital of the children of the deprived and workless It sets aside intensifying poverty and inequality instead claiming that basing children's rearing and education on brain science will transform both the child's and the nation's health and wealth Leading critic of such neuropretensions neuroscientist Steven Rose and sociologist of science Hilary Rose take a sceptical look at these claims and the science underlying them sifting out the sensible from the snake oil Examining the ways in which science is shaped by and shapes the political economy of neoliberalism they argue that neuroscience on its own is not able to bear the weight of these hopes

Genetic Technology: A New Frontier Assessment Office Of Technology, 2020-09-23 First published in 1982. This report examines the application of classical and molecular genetic technologies to microorganisms, plants and animals. This book is one of the first comprehensive documents on emerging genetic technologies and their implications for society. The authors discuss the opportunities and problems involved, describe current techniques and attempt to project some of the economic, environmental and institutional impacts of those techniques. The issues they raise go beyond those of technology utility and economic feasibility. As we gain the ability to manipulate life, we must face basic questions of just what life means and how far we can reasonably and safely allow ourselves to go.

Good Reasons for Bad Feelings
 Randolph M. Nesse, MD, 2019-02-12 A founder of the field of evolutionary medicine uses his decades of experience as a psychiatrist to provide a much needed new framework for making sense of mental illness Why do I feel bad There is real power in understanding our bad feelings With his classic *Why We Get Sick* Dr Randolph Nesse helped to establish the field of evolutionary medicine Now he returns with a book that transforms our understanding of mental disorders by exploring a fundamentally new question Instead of asking why certain people suffer from mental illness Nesse asks why natural selection has left us all with fragile minds Drawing on revealing stories from his own clinical practice and insights from evolutionary biology Nesse shows how negative emotions are useful in certain situations yet can become overwhelming Anxiety protects us from harm in the face of danger but false alarms are inevitable Low moods prevent us from wasting effort in pursuit of unreachable goals but they often escalate into pathological depression Other mental disorders such as addiction and anorexia result from the mismatch between modern environment and our ancient human past And there are good evolutionary reasons for sexual disorders and for why genes for schizophrenia persist Taken together these and many more insights help to explain the pervasiveness of human suffering and show us new paths for relieving it by understanding individuals as individuals
