Rhodolith/Maërl Beds: A Global Perspective Rafael Riosmena-Rodríguez, Wendy Nelson, Julio Aguirre, 2016-10-07

Rhodolith beds are recognized internationally as a unique ecosystem and they are the focus of this interdisciplinary book These marine beds occur worldwide from the tropics to the poles ranging in depth from intertidal to deep subtidal habitats and they are also represented in extensive fossil deposits In the light of international interest in rhodoliths and maerl concerning their role in coastal ecosystems and with respect to biodiversity fisheries and the production of sediment this book provides the most comprehensive view possible As readers will discover rhodoliths maerl are fundamental to a range of ecological processes acting as ecosystem engineers including playing key roles in recruitment and providing nursery habitats Rhodoliths maerl have been used commercially in some parts of the world and they are understood to be vulnerable to coastal modifications and human induced change and hence their status may serve as an indicator of ecosystem health Rhodoliths maerl contribute to global carbon budgets although the extent remains to be evaluated as do the potential impacts of changing global climates and ocean acidification *Earth Materials* Kevin Hefferan, John O'Brien, 2010-11-09

Minerals and rocks form the foundation of geologic studies This new textbook has been written to address the needs of students at the increasing number of universities that have compressed separate mineralogy and petrology courses into a one or two semester Earth materials course Key features of this book include equal coverage of mineralogy sedimentary petrology igneous petrology and metamorphic petrology copious field examples and regional relationships with graphics that illustrate the concepts discussed numerous case studies to show the uses of earth materials as resources and their fundamental role in our lives and the global economy and their relation to natural and human induced hazards the integration of earth materials into a cohesive process based earth systems framework two color throughout with 48 pages of four color Readership students taking an earth materials or combined mineralogy and petrology course in an earth science degree program It will also be useful for environmental scientists engineering geologists and physical geographers who need to learn about minerals rocks soil and water in a comprehensive framework A companion website for this book is available at www.wiley.com/go/hefferan/earthmaterials Apatites and their Synthetic Analogues Petr Ptáček, 2016-04-13 Apatite type

Chaminé, 2022-01-12 This edited book is based on the papers accepted for presentation during the 2nd Springer Conference of the Arabian Journal of Geosciences CAJG 2 Tunisia in 2019 Major subjects treated in the book include geomorphology sedimentology and geochemistry The book presents an updated unique view in conjugating field studies and modeling to better quantify the process product binomial unusual in geosciences In the geomorphology section 24 papers deal with topics related to fault slip and incision rates soil science landslides and debris flows coastal processes and geoarcheology and geoheritage Under the sedimentology section 34 papers including stratigraphy and environmental tectonic and diagenetic processes together with evolutionary biostratigraphic and paleo environmental significance of paleontology are presented Additionally this section also contains papers on marine geosciences from molecular proxies related to climate to geophysical surveys Last but not least the third section on geochemistry is composed of 26 papers that are focused on sedimentary geochemistry and mineralogical characterization magmatic and metamorphic processes and products and the origin and exploration of mineral deposits This book resumes the current situation related to the abovementioned topics mainly in the Mediterranean realm The volume book is of interest to all researchers practitioners and students in the fields of geomorphology sedimentology and geochemistry as well as those engaged in environmental geosciences soil science stratigraphy and paleontology geoarcheology and geoheritage marine geosciences petrology metallogenesis and mineral deposits

Palaeozoic Reefs and Bioaccumulations J. Javier Álvaro, 2007 The geological record contains a fascinating diversity of reefs and shell accumulations As with many other

biosedimentary structures their facies characterization requires careful observation at outcrop and sample scale and in thin section to provide information about the global geometries fabrics and textures respectively This collection of papers encompasses the breadth of sedimentary geometries and facies displayed by Palaeozoic reefs shell accumulations and transitional composite deposits The definition of reefs and shell concentrations has given rise to variations in nomenclature The papers in this volume cover specific problems regarding the nomenclature and facies characterization of reefs shell accumulations and transitional composite deposits However rather than attempt a complete revision of terms the authors have touched on some of the important issues at this stage of development in the field the main climatic environmental and evolutionary factors that controlled the Palaeozoic development of shell accumulations and reefs
