Mid-Atlantic Freshwater Wetlands: Advances in Wetlands Science, Management, Policy, and Practice Robert P. Brooks,Denice Heller Wardrop,2013-01-25 The lands and waters of the Mid Atlantic Region MAR have changed significantly since before the 16th century when the Susquehannock lived in the area Much has changed since Captain John Smith penetrated the estuaries and rivers during the early 17th century since the surveying of the Mason Dixon Line to settle border disputes among Maryland Pennsylvania and Delaware during the middle of the 18th century and since J Thomas Scharf described the physiographic setting of Baltimore County in the late 19th century As early as 1881 Scharf provides us with an assessment of the condition of the aquatic ecosystems of the region albeit in narrative form and already changes are taking place the conversion of forests to fields the founding of towns and cities and the depletion of natural resources We have always conducted our work with the premise that man is part of and not apart from this ecosystem and landscape This premise and the historical changes in our landscape provide the foundation for our overarching research question how do human activities impact the functioning of aquatic ecosystems and the ecosystem services that they provide and how can we optimize this relationship Wetland Soils Michael J. Vepraskas,Christopher B. Craft,2016-04-21 Boundaries of a wetland must be identified and located in the field by examining three parameters wetland plants wetland hydrology and hydric soils This book explains how wetland soils are formed described and can be identified in the field The new edition is a major revision of the 2000 book Written by scientists with extensive field and academic experience it contains 11 new chapters updates throughout and augments the previous material on wetland functions and restorations while maintaining the field oriented focus of the first book Wetland and Stream Rapid Assessments John Dorney,Rick Savage,Ralph W Tiner,Paul Adamus,2018-08-07 Wetland and Stream Rapid Assessments Development Validation and Application describes the scientific and environmental policy background for rapid wetland and stream assessments how such assessment methods are developed and statistically verified and how they can be used in environmental decision making including wetland and stream permitting In addition it provides several case studies of method development and use in various parts of the world Readers will find guidance on developing and testing such methods along with examples of how these methods have been used in various programs across North America Rapid wetland and stream functional assessments are becoming frequently used methods in federal state and local environmental permitting programs in North America Many governments are interested in developing new methods or improving existing methods for their own jurisdictions This book provides an ideal guide to these initiatives Offers guidance for the use and evaluation of rapid assessments to developers and users of these methods as well as students of wetland and stream quality Contains contributions from sources who are successful in academia industry and government bringing credibility and relevance to the content Includes a statistically based approach to testing the validity of the rapid method which is very important to the usefulness and defensibility of assessment methods

Indicators and Surrogates of Biodiversity and Environmental Change David Lindenmayer, Philip Barton, Jennifer

Pierson,2015-11-02 Ecological indicators and surrogates are used widely by resource managers to monitor and understand complex biota and ecosystem processes Their potential to guide complex resource management has meant they have been proposed for use in all ecosystems worldwide Despite extensive research into indicators and surrogates there remains much controversy about their use in addition to major issues and knowledge gaps associated with their identification testing and application Indicators and Surrogates of Biodiversity and Environmental Change provides insights into the use of indicators and surrogates in natural resource management and conservation where to use them where not to use them and how to use them Using an ecological approach the chapters explore the development application and efficacy of indicators and surrogates in terrestrial aquatic marine and atmospheric environments The authors identify current gaps in knowledge and articulate the future directions for research needed to close those gaps This book is written by the world s leading thinkers in the area of indicators and surrogates It is the first major synthesis of learnings about indicators and surrogates and will be a critical resource for the vast number of people developing and applying them in ecosystems around the world It will be an essential resource for scientists policy makers and students with interests in surrogates and indicators *Wading Right In*
