Federation,2012-05-29 The Definitive Guide to Membrane Bioreactors for Wastewater Treatment This Water Environment Federation resource presents best practices for the use of membrane bioreactors for wastewater treatment The book begins with an overview of membrane and biological process fundamentals followed by coverage of membrane bioreactor system integrated process design The physical design of features unique to membrane bioreactors and the procurement of membrane equipment are discussed This authoritative manual also covers the operation of properly designed membrane bioreactor facilities Membrane Bioreactors covers Membrane bioreactor capabilities Membrane fundamentals Biological process fundamentals Membrane bioreactor process design Membrane bioreactor facility design Membrane bioreactor membrane equipment procurement Membrane bioreactor operation     Microbial Approach of Biofiltration in Industrial Wastewater Treatment for the Sustainability of Environment Maulin P. Shah,2025-02-04 The ever increasing number of pollutants released into the environment drives the search for new treatment technologies or the modification of existing ones In this sense innovation in biofiltration systems seems promising and therefore a book on the current developments and innovations on its subject is very appropriate Biofiltration is a relatively emerging new technology applied to the treatment of wastewater and other toxic substances Over the past two decades this technology has become an economically viable process for treating the wide variety of unruly pollutants released into the environment For example it is speculated that the US biofiltration market will reach more than 100 million by 2020 This book aims to show how innovation in biofiltration can provide effective solutions to overcome the serious problem of water pollution worldwide The removal of contaminants will result from the combined effects of biological oxidation adsorption and filtration processes Many physicochemical and operational factors influence the performance treatment costs and long term stability of biofilters for wastewater treatment This book focuses on identifying factors that affect biofiltration explains their influence and provides guidelines on how to control these factors to optimize better control over the control of pollutants present in wastewater treatment plants The fundamental basis of treatment in biofilters is the action of microorganisms that degrade pollutants and consequently the book also discusses in depth the microbial ecology of biofiltration     *Encyclopedia of Surface and Colloid Science* - Arthur T. Hubbard,2002-07-18 This comprehensive reference collects fundamental theories and recent research from a wide range of fields including biology biochemistry physics applied mathematics and computer materials surface and colloid science providing key references tools and analytical techniques for practical applications in industrial agricultural and forensic processes as well as in the production of natural and synthetic compounds such as foods minerals paints proteins pharmaceuticals polymers and soaps     **Comparative Evaluation of Ultrafiltration/Microfiltration Membranes for Removal of Nitrocellulose (NC) Fines from Wastewater** Byung Joo Kim,Mark M. Clark,Yonghun Lee,1997 Nitrocellulose NC is a basic constituent for military gun propellants NC wastewater is a byproduct of the NC manufacturing process Crossflow microfiltration ultrafiltration MF UF may recover NC fines and allow the wastewater to be recycled This bench

scale crossflow membrane filtration system was constructed to test the application of MF UF technology to NC wastewater. This study was conducted in two phases. The results of Phase I were used to select a candidate membrane. In Phase II, a pilot scale crossflow membrane filtration system was constructed to 1 investigate the concentration polarization and fouling mechanism caused by NC fines during crossflow filtration of NC wastewater 2 explore flux decline behavior of NC wastewater streams with various membranes and 3 study the effects of operating parameters on flux decline behavior. This study found that 1 UF membranes have a lower flux decline rate and a higher flux recovery than MF membranes but UF membranes have a relatively low permeate production rate compared to MF membranes 2 A critical membrane pore size of about 0.1 micron exists at which point the worst flux performance occurs 3 The cellulose based hydrophilic membranes have the best flux performance

**Radiation Protection and Nuclear Safety: Experiment and Guidance** Xiaoqin Nie, Junling Wang, 2025-05-31 This book reviews the theory and practice on radiation protection and nuclear safety based on experimental case studies. It concentrates on research advances in radiation detection, radiation monitoring, radioactive waste treatment and disposal. It can both serve as a textbook for advanced undergraduates majoring in radiation protection and nuclear safety, nuclear engineering and technology, nuclear chemical engineering and nuclear fuel engineering and a reference for industry and institutes. The basis of English translation of this book originally in Chinese was facilitated by artificial intelligence. The content was later revised by the author for accuracy.

**Handbook of Food Engineering** Dennis R. Heldman, Daryl B. Lund, Cristina Sabliov, 2018-12-19 As the complexity of the food supply system increases, the focus on processes used to convert raw food materials and ingredients into consumer food products becomes more important. The Handbook of Food Engineering, Third Edition, continues to provide students and food engineering professionals with the latest information needed to improve the efficiency of the food supply system. As with the previous editions, this book contains the latest information on the thermophysical properties of foods and kinetic constants needed to estimate changes in key components of foods during manufacturing and distribution. Illustrations are used to demonstrate the applications of the information to process design. Researchers should be able to use the information to pursue new directions in process development and design and to identify future directions for research on the physical properties of foods and kinetics of changes in the food throughout the supply system. Features: Covers basic concepts of transport and storage of liquids and solids; heating and cooling of foods and food ingredients; New chapter covers nanoscale science in food systems; Includes chapters on mass transfer in foods and membrane processes for liquid concentration and other applications; Discusses specific unit operations on freezing, concentration, dehydration, thermal processing and extrusion. The first four chapters of the Third Edition focus primarily on the properties of foods and food ingredients with a new chapter on nanoscale applications in foods. Each of the eleven chapters that follow has a focus on one of the more traditional unit operations used throughout the food supply system. Major revisions and/or updates have been incorporated into chapters on heating and
