1. A patient with a viral illness and severe vomiting has an elevated CO_2 level and a blood pH of 7.53. She is breathing slowly. What condition does the patient have?

• **Metabolic alkalosis**

- The patient's pH and CO_2 level are both elevating (moving in the same direction). This indicates metabolic alkalosis. The CO_2 level is high because her respiratory system is attempting to compensate for the high pH by exhaling less and retaining more CO_2 .
