Patterns In Freshwater Fish Ecology:

Patterns in Freshwater Fish Ecology William J. Matthews, 1998-01-31 This book is about freshwater fish in streams lakes reservoirs and special habitats around the world It addresses approximately twenty major topics in freshwater fish ecology in a format suitable for use in graduate level courses The book focuses on basic ecology and contains much data from fisheries ecology Dr Matthews explains the way in which empirical studies theoretical concepts and experimental evaluations blend into the current state of the art with respect to each major topic and provides original data and interpretations on some points as well as new syntheses Each chapter contains empirical information a synthesis and a summary *Patterns in Freshwater Fish Ecology* William J. Matthews, 2011-09-26 Nearly a decade ago I began planning this book with the goal of summarizing the existing body of knowledge on ecology of freshwater fishes in a way similar to that of H B N Hynes comprehensive treatise *Ecology of Running Waters* for streams The time seemed appropriate as there had been several recent volumes that synthesized much information on a range of topics important in fish ecology from biogeographic to local scales For example the *Fish Atlas* Lee et al 1980 had provided range maps and basic entry to the original literature for all freshwater fishes in North America and in 1986 Hocutt and Wiley's *Zoogeography of North American Fishes* provided a detailed synthesis of virtually everything known about distributional ecology of fishes on that continent Tim Berra 1981 had summarized in convenient map form the worldwide distribution of all freshwater fish families and Joe Nelson's 1976 and 1984 editions of *Fishes of the World* had appeared To complement these big picture views of fish distributions the volume on *Community and Evolutionary Ecology of North American Freshwater Fishes* edited by David Heins and myself Matthews and Heins 1987 had provided an opportunity for more than 30 individuals or groups to summarize their work on stream fishes albeit mostly for warmwater systems *Patterns in Freshwater Fish Ecology* William J. Ecology of Australian Freshwater Fishes Paul Humphries,Keith Walker,2013-04-10 This edited volume reviews our past and present understanding of the ecology of Australian freshwater fishes It compares patterns and processes in Australia with those on other continents discusses the local relevance of ecological models from the northern hemisphere and considers how best to manage our species and their habitats in the face of current and future threats In view of these challenges the need for redress is urgent The chapters are written by some of our foremost researchers and managers developing themes that underpin our knowledge of the ecology conservation and management of fish and fish habitats For each theme the authors formulate a synthesis of what is known consider the need for new perspectives and identify gaps and opportunities for research monitoring and management The themes have an Australian context but draw upon ideas and principles developed by fish biologists in other parts of the world The science of freshwater fish ecology in Australia has grown rapidly from its roots in natural history and taxonomy This book offers an introduction for students researchers and managers one that the authors hope will carry Australian fish biology and resource management to new levels of understanding

Ecology of North American Freshwater Fishes Stephen T. Ross,2013-06-01 The North American freshwater fish fauna is the most diverse and thoroughly researched temperate fish

fauna in the world Ecology of North American Freshwater Fishes is the only textbook to provide advanced undergraduate and graduate students and researchers with an up to date and integrated view of the ecological and evolutionary concepts principles and processes involved in the formation and maintenance of this fauna Ecology of North American Freshwater Fishes provides readers with a broad understanding of why specific species and assemblages occur in particular places Additionally the text explores how individuals and species interact with each other and with their environments how such interactions have been altered by anthropogenic impacts and the relative success of efforts to restore damaged ecosystems This book is designed for use in courses related to aquatic and fish ecology fish biology ichthyology and related advanced ecology and conservation courses and is divided into five sections for ease of use Chapter summaries supplemental reading lists online sources extensive figures and color photography are included to guide readers through the material and facilitate student learning Part 1 Faunal origins evolution and diversity Presents a broad picture both spatially and temporally of the derivation of the fauna including global and regional geological and climatological processes and their effects on North American fishes Part 2 Formation maintenance and persistence of local populations and assemblages Focuses on how local fish populations and assemblages are formed and how they persist or not through time Part 3 Form and function Deals with the relationship of body form and life history patterns as they are related to ecological functions Part 4 Interactions among individuals and species Discusses the numerous interactions among individuals and species through communication competition predation mutualism and facilitation Part 5 Issues in conservation Focuses on several primary conservation issues such as flow alterations and the increasing biotic homogenization of faunas

Freshwater Fishes R.M. McDowall, 2010-07-27 In many ways this book is the culmination of more than four decades of my exp ration of the taxonomy biogeography and ecology of New Zealand s quite small freshwater fish fauna I began this firstly as a fisheries ecologist with the New Zealand Marine Department then responsible for the nation s fisheries research and mana ment and then with my PhD at the Museum of Comparative Zoology at Harvard University Cambridge MA USA in the early mid 1960s Since then employed by a series of agencies that have successively been assigned a role in fisheries research in New Zealand I have been able to explore very widely the natural history of that fauna Studies of the fishes of other warm

to cold temperate southern lands have followed particularly southern Australia New Caledonia Patagonian South America the Falkland Islands and South Africa and in many ways have provided the rather broader context within which the New Zealand fauna is embedded in terms of geography phylogeny and evolutionary history and knowing this context makes the patterns within New Zealand all the clearer An additional stream in these studies in substantial measure driven by the behavioural ecology of these fishes round the Southern Hemisphere has been exploration of the role of diadromy regular migrations between marine and freshwater biomes in fisheries ecology and biogeography and eventually of diadromous fishes worldwide
