Partial Differential Equations through Examples and Exercises Endre Pap, Arpad Takaci, Djurdjica Takaci, 2012-10-11 The book Partial Differential Equations through Examples and Exercises has evolved from the lectures and exercises that the authors have given for more than fifteen years mostly for mathematics computer science physics and chemistry students By our best knowledge the book is a first attempt to present the rather complex subject of partial differential equations PDEs for short through active reader participation Thus this book is a combination of theory and examples In the theory of PDEs on one hand one has an interplay of several mathematical disciplines including the theories of analytical functions harmonic analysis ODEs topology and last but not least functional analysis while on the other hand there are various methods tools and approaches In view of that the exposition of new notions and methods in our book is step by step A minimal amount of expository theory is included at the beginning of each section Preliminaries with maximum emphasis placed on well selected examples and exercises capturing the essence of the material Actually we have divided the problems into two classes termed Examples and Exercises often containing proofs of the statements from Preliminaries The examples contain complete solutions and also serve as a model for solving similar problems given in the exercises The readers are left to find the solution in the exercises the answers and occasionally some hints are still given The book is implicitly divided in two parts classical and abstract
