## **Particulars Universals Clinical Developmental Psychology:**

**Particulars and Universals in Clinical and Developmental Psychology** Meike Watzlawik, Alina Kriebel, Jaan Valsiner, 2015-12-01 What sparks a psychologist's interest in a certain phenomenon Is it a symptom a syndrome a treatment the usual the exceptional the group the individual An epistemologist for example focuses on the group and delivers group results The clinician has to focus on the patient although the patient may be perceived as one of a group e.g. all patients with the same disease The patient usually focuses on the clinician but can take other opinions into account especially when the clinician is not considered to be the only authority These dynamics observable in therapy as well as in research are critically reflected in this book not only highlighting differences but also commonalities individuals share They all filter information and concentrate on certain aspects according to their socialization They all have different expectations and can yet all deal with the same objective Communication and building relationships seem to be vital this book aims to support this quest by moving from the universal to the particular *Children and Money* Takahashi Noboru, Yamamoto Toshiya, 2020-03-01 In the Pocket Money Project researchers from four countries Japan Korea China and Vietnam collaborated and studied how children in those four countries were involved with money combining various research methods and approaches What our project tries to present throughout this book is that money is not only just a tool of exchange in the context of the market economy but it also serves as a tool to mediate human relationships in individual cultures and the tool is used and mediated by norms The structure of the norms differs among cultures and the same action has different meanings thus when the structure of norms in a culture is identified the meaning of an action in the culture becomes clear The research practice of the Cultural Psychology of Differences does not aim to create inventories of static differences When a researcher who is also a member of a specific culture witnesses common behavior cultural practices among the others belonging to a different culture the researcher is surprised and at the same time reflects on his or her own common behavior cultural practices by doing so mutual understanding and empathy are deepened and this is exactly what the Cultural Psychology of Differences aims to do Culture of the others appears dynamically swaying ourselves theorizing such a process is the task of our Cultural Psychology of Differences We believe this practice of understanding different cultures will provide a practical prescription for mutual understanding through tensions and surprise not only for psychology but also for members of the countries that historically and constantly have had strained relationships Cultural Psychology of Differences is the ideal that cultural psychology to study the relationships between mind and culture should be pursued in the future *Cultural Psychology in Communities* Floor van Alphen, Susanne Normann, 2020-08-01 This volume aims at further articulating and developing the cultural psychological interest in community It focuses on the processes through which individuals constitute communities and the processes that restrain or enable moving forward with others This interest is necessary especially now that the world is on the move Economic crises political crises and ecological crises have led to reinforced migration patterns a rise in

authoritarianism and xenophobia and have become a threat to the survival of the world as we know it particularly to minorities and indigenous communities At the same time we are witnessing the birth of new networks dialogues and actions generated by people within between and among communities Therefore this volume collects interdisciplinary theoretical empirical and applied contributions enabling engagement with communities in cultural psychology This involves both reflections on meaning making processes and projections on how they feed into social transformation in exchange with community psychology anthropology and sociology People vitally depend on community to effectively negotiate or resist in complex intercultural or intergroup settings In the wake of human rights violations or to prevent further damage to the environment a community is needed to undertake action From feminist movements and disability activism to the otherwise marginalized how do people constitute communities How do they resist as a community How can cultural psychology contribute not only to understand meaning making processes but also connect them to processes of social transformation Migration moving through and connecting to different communities can affect meaning making in significant ways People consider themselves as members of one or another community but they also increasingly enter into new settings of social practice with new means for action How might creative meaning making build bridges between communities How might new community arise in between or with others How can cultural psychology deal with intercultural processes without reifying different cultures These are the central questions that the mostly emerging scholars from many corners of the world address in this book Their research addresses different institutional settings that are resisted and transformed from within in dialogue with others From social work NGOs and municipal activity to university talent mobility and art projects for youth Other settings are newly inhabited from the public square and the social media to a foreign city and neighborhood church Thus more communities appear on the map of cultural psychology

The Cambridge Handbook of Sociocultural Psychology  
Alberto Rosa, Jaan Valsiner, 2018-07-12 Sociocultural psychology is a discipline located at the crossroads between the natural and social sciences and the humanities This international overview of the field provides an antireductionist and comprehensive account of how experience and behaviour arise from human action with cultural materials in social practices The outcome is a vision of the dynamics of sociocultural and personal life in which time and developmental constructive transformations are crucial This second edition provides expanded coverage of how particular cultural artefacts and social practices shape experience and behaviour in the realms of art and aesthetics economics history religion and politics Special attention is also paid to the development of identity the self and personhood throughout the lifespan while retaining the emphasis on experience and development as key features of sociocultural psychology

**Idiographic Approach to Health** Raffaele De Luca Picione, Jensine Nedergaard, Maria Francesca Freda, Sergio Salvatore, 2018-12-01 The concept of health is a challenge of great complexity in terms of theoretical methodological and intervention within the idiographic frame Health cannot be considered an abstract condition but a means a resource aimed at achieving objectives that relate to the ability of people to lead their lives in a productive way individually socially and economically Health is a process that is not based on the definition of standards and categories on the basis of which typifying the states of health Rather it has to be considered a process on a large scale and on many entangled levels aimed at generating a culture of the health as a resource for individuals and communities and to promote skills needed to transform these resources into developmental goals The notion of health indeed defined and interpreted in terms of state and not of process meets the immediate paradox of being an indicator of normativity by reason of which we risk a proliferation of new and potentially infinite forms of deviation The approach of the idiographic sciences see previous volumes of the Yearbook Idiographic Science Series by same publisher IAP

considers that every psychological process but in general every process from organic to the social and cultural ones is characterized by a contextual situated and contingent dynamics That dynamics is always characterized by a never ending opening of its cycles and great variability Conditions of stagnation and hypostatization are characteristic of all forms of disease physical mental and social that sclerotize relational links between people and their environments Health is therefore a process that presents oscillation in the same way of any developmental process that has moments of crisis and rupture in order to re organize new forms of relationship with the social and cultural environment This book represent a fruitful way to deep many cogent issues and to dialogue with an idiographic perspective in order to discuss the concept of health to define its cultural meanings and possible polysemy e g wellness care hygiene quality of life resilience prevention healing deviation normality subjective potentiality for development etc its areas of pertinence and intervention somatic psychological social trying to offer possible alternatives to the normalization of health and creating new incentives for the reflection

*Science and Medicine in Dialogue* Roger Bibace,James Laird,Kenneth Noller,Jaan Valsiner,2005-01-30 How does a doctor or therapist bridge the gap between particulars and generalizations regarding patients and various phenomena or diseases The authors of this volume illustrate the multiple ways practitioners in the fields of clinical psychology and medicine address the tension between the universal nature of scientific knowledge and its particular applications They discuss the fact that some decisions if made erroneously have impacts that cannot be reversed An error in the realms of medicine ecology peace and war brings with it psychological strategies that differ from those a practitioner faces where errors are correctable How does a doctor or therapist bridge the gap between particulars and generalizations regarding patients and various phenomena or diseases The authors of this volume illustrate the multiple ways practitioners in the fields of clinical psychology and medicine address the tension between the universal nature of scientific knowledge and its particular applications They discuss the fact that some decisions if made erroneously have impacts that cannot be reversed An error in the realms of medicine ecology peace and war brings with it psychological strategies that differ from those a practitioner faces where errors are correctable The disciplines of psychology and medicine have two shared goals The first is that both disciplines seek a basic understanding about how human beings exist in their ordinary biological and psychological worlds and the second is the attempt to describe and treat disruptions of each person s healthy state of being Therefore the four coeditors uncover areas of mutual interest between the two disciplines and the basis for the conflicts that have arisen in their fields

Multidisciplinary Perspectives on Family Violence Renate C.A. Klein,2005-08-15 A clearly focused introduction to family conflicts and domestic violence by internationally renowned scholars from anthropology psychology sociology and women s studies

**The Innate Mind** Peter Carruthers,Stephen Laurence,Stephen Stich,2005-07-14 This is the first volume of a projected three volume set on the subject of innateness The extent to which the mind is innate is one of the central questions in the human sciences with important implications for many surrounding debates By bringing together the top nativist scholars in philosophy psychology

and allied disciplines these volumes provide a comprehensive assessment of nativist thought and a definitive reference point for future nativist inquiry. *The Innate Mind: Structure and Content* concerns the fundamental architecture of the mind addressing such questions as: What capacities, processes, representations, biases and connections are innate? How do these innate elements feed into a story about the development of our mature cognitive capacities and which of them are shared with other members of the animal kingdom? The editors have provided an introduction giving some of the background to debates about innateness and introducing each of the subsequent essays as well as a consolidated bibliography that will be a valuable reference resource for all those interested in this area. The volume will be of great importance to all researchers and students interested in the fundamental nature and powers of the human mind. Together the three volumes in the series will provide the most intensive and richly cross-disciplinary investigation of nativism ever undertaken. They point the way toward a synthesis of nativist work that promises to provide a new understanding of our minds and their place in the natural order.

*The Psychology of Personhood* Jack Martin, Mark H. Bickhard, 2012-11-29. What is a person? Surprisingly little attention is given to this question in psychology. For much of the past century psychology has tended to focus on the systematic study of processes rather than on the persons who enact and embody them. In contrast to the reductionist picture of much mainstream theorising which construes persons as their mental lives, behaviours or neurophysiological particulars, *The Psychology of Personhood* presents persons as irreducibly embodied and socially situated beings. Placing the study of persons at the centre of psychology, this book presents novel insights on the typical everyday actions and experiences of persons in relation to each other and to the broader society and culture. Leading scholars from diverse academic disciplines paint an integrative portrait of the psychological person within evolutionary, historical, cultural, developmental and everyday contexts.
