

6300 Series Owner/Operator Manual

AC PANELBOARD

When 120 VAC is connected to Power Center via commercial power or AC generator, the 120 VAC circuits are protected by the breakers contained in the AC PANELBOARD.

120 VAC circuits may be turned off by flipping breaker to indicate "OFF." The circuits may be turned on or reset by flipping breaker to indicate "ON."

12 V DC FROM POWER CONVERTER SECTION

When 120 VAC is connected to the Power Center via commercial power or AC generator, and the circuit breaker controlling the POWER CONVERTER Section is "ON", the POWER CONVERTER Section will convert the 120 VAC to 12 VDC and is instantly switched—via the Automatic Relay—into the 12 VDC RV circuits to operate the 12 volt lights and motors. A cooling fan will come on when certain temperatures are reached in the lower section. Equipment limited to operation from 12 volt battery power only—including 12 volt TVs, radios, stereos, unfiltered fluorescent lights—must be connected to the fused battery circuits of DC DISTRIBUTION PANEL or RV battery line.

DO NOT connect equipment requiring more than 3 amps to terminal "B".

AUTOMATIC-RESET THERMAL BREAKER

A protective Thermal Breaker will "break" the 120 VAC power to POWER CONVERTER Section of Power Center if POWER CONVERTER becomes overheated—by operation above its maximum limit for an extended period of time or obstruction of ventilation to unit.

POWER CONVERTER Section will instantly switch 12-volt light and motors to battery.

In either case, the Thermal Breaker will reset itself after a period of time, and the lights and motors will again resume operation from POWER CONVERTER Section—only to shortly again "break". When this occurs, take immediate steps to correct cause of overheating. A portion of RV 12-volt load—lights or motors or both—should be turned off to reduce total load. Also, inspect POWER CONVERTER Section to make certain ventilation is not obstructed.
