Sustainable Development in the Digital Era Leonilde Varela, Goran Putnik, Manupati Vijaya Kumar, 2025-08-26

Collaborative manufacturing and management are a fundamental requirement in today's digital age to enable an innovative and sustainable development of companies. This is possible and highly recommended not just in the context of traditional companies but further in cyber physical systems and in the context of extended distributed networked and virtual organizations. The book provides fundamental methodologies, models, methods, tools, and platforms about collaborative engineering to support manufacturing and management processes and practices aligned with the current requirements underlying Industry 4.0 and Society 5.0. It describes the application of collaborative management paradigms about dynamic distributed integrated intelligent predictive parallel and real time based approaches and tools to enable collaborating entities including suppliers, business partners, and other stakeholders to develop projects and solve problems that are becoming increasingly more complex and challenging currently. Such collaborative processes and practices require companies and underlying stakeholders to be connected and to further communicate and share data, problems, and expertise and other kind of resources along with concerns, difficulties, and challenges requiring co-learning and the co-creation of knowledge, processes, methods, and systems to interactively support projects and problem solving. The book reviews the advances and provides case studies to assist scientists, practitioners, and students in high standard manufacturing management processes and practices to properly handle daily problems and challenges with a special focus on the use of recent paradigms and tools to support manufacturing management decision making through innovative methodologies and approaches for permitting researchers to learn, develop further work, and become advanced practitioners and promoters of collaborative management.

The Workplace of the Future Jon-Arild Johannessen, 2018-09-27. The Fourth Industrial Revolution is a global development that shows no signs of slowing down. In his book *The Workplace of the Future: The Fourth Industrial Revolution, the Precariat and the Death of Hierarchies*, Jon-Arild Johannessen sets a chilling vision of how robots and artificial intelligence will completely disrupt and transform working life. The author contests that once the dust has settled from the Fourth Industrial Revolution, workplaces and professions will be unrecognizable, and we will see the rise of a new social class, the precariat. We will live side by side with the working poor, people who have several jobs but still can't make ends meet. There will be a small salaried elite consisting of innovation and knowledge workers. Slightly further into the future, there will be a major transformation in professional environments. Johannessen also presents a typology for the precariat, the uncertain work that is created and develops a framework for the working poor as well as for future innovation and knowledge workers and sets out a new structure for the social hierarchy. A fascinating and thought-provoking insight into the impact of the Fourth Industrial Revolution. *The Workplace of the Future* will be of interest to professionals and academics alike. The book is particularly suited to academic courses in management, economy, political science, and social sciences.

Knowledge-based Reactive Scheduling Elizabeth Szelke, Roger M. Kerr, 1994
Reactive scheduling is concerned with monitoring and controlling the execution of predictive schedules and making any changes required to bring them in line with unanticipated events or disturbances happening in real time Whilst predictive scheduling has been a focus of research for many years it is only recently that explicit attention has been given to the specific problems of reactive scheduling and the relationship between the two This publication explores the scope and status of both existing and potential approaches to reactive scheduling Concentration is centred on knowledge based approaches as the importance of domain knowledge whether stored in computers or in the brains of experienced schedulers is becoming increasingly apparent Contributions examine a variety of approaches ranging from reactive scheduling decision support frameworks in which the knowledge comes mainly from the human through to completely new approaches to automated reactive scheduling such as neural networks The book will be of particular interest to researchers students and engineers involved in the manufacturing and software development industries In addition to providing a significant reference volume it also aims to stimulate increased discussion in this emerging field
