Meaning And Mental Representation Bradford S:

Meaning and Mental Representation Robert Cummins, 1991-02-05 In this provocative study Robert Cummins takes on philosophers both old and new who pursue the question of mental representation as an abstraction apart from the constraints of any particular theory or framework Cummins asserts that mental representation is in fact a problem in the philosophy of science a theoretical assumption that serves different explanatory roles within the different contexts of commonsense or folk psychology orthodox computation connectionism or neuroscience Cummins looks at existing and traditional accounts by Locke Fodor Dretske Millikan and others of the nature of mental representation and evaluates these accounts within the context of orthodox computational theories of cognition He proposes that popular accounts of mental representation are inconsistent with the empirical assumptions of these models which require an account of representation like that involved in mathematical modeling In the final chapter he considers how mental representation might look in a connectionist context A Bradford Book

Meaning and Mental Representations Umberto Eco, Marco Santambrogio, Patrizia Violi, 1988 an excellent collection Journal of Language Social Psychology An important collection of original essays by well known scholars debating the questions of logical versus psychologically based interpretations of language

What are Mental Representations? Joulia Smortchkova, Krzysztof Dołęga, Tobias Schlicht, 2020-09-28 The topic of this book is mental representation a theoretical concept that lies at the core of cognitive science Together with the idea that thinking is analogous to computational processing this concept is responsible for the cognitive turn in the sciences of the mind and brain since the 1950s Conceiving of cognitive processes such as perception reasoning and motor control as consisting of the manipulation of contentful vehicles that represent the world has led to tremendous empirical advancements in our explanations of behaviour Perhaps the most famous discovery that explains behavior by appealing to the notion of mental representations was the discovery of place cells that underlie spatial navigation and positioning which earned researchers John O Keefe May Britt Moser and Edvard I Moser a joint Nobel Prize in 2014 And yet despite the empirical importance of the concept there is no agreed definition or theoretical understanding of mental representation This book constitutes a state of the art overview on the topic of mental representation assembling some of the leading experts in the field and allowing them to engage in meaningful exchanges over some of the most contentious questions The collection gathers both proponents and critics of the notion making room for debates dealing with the theoretical and ontological status of representations the possibility of formulating a general account of mental representation which would fit our best explanatory practices and the possibility of delivering such an account in fully naturalistic terms Some contributors explore the relation between mutually incompatible notions of mental representation stemming from the different disciplines composing the cognitive sciences such as neuroscience psychology and computer science Others question the ontological status and explanatory usefulness of the notion And finally some try to sketch a general theory of mental representations that could face the challenges outlined in the

more critical chapters of the volume **Philosophy of Mental Representation** Hugh Clapin, 2002 Five leading figures in the philosophy of mind and cognitive science debate the central topic of mental representation Each author's contribution is specially written for this volume and then collectively discussed by the others The editor frames the discussions and provides a way into the debates for new readers An exciting feature of this collection is the transcribed discussion among all the contributors following each exchange This is the latest thinking on mental representation carefully and critically analysed by the leading thinkers in the field *Connectionism and the Philosophy of Mind* T. Horgan, J. Tienson, 2012-12-06 This series will include monographs and collections of studies devoted to the investigation and exploration of knowledge information and data processing systems of all kinds no matter whether human other animal or machine Its scope is intended to span the full range of interests from classical problems in the philosophy of mind and philosophical psychology through issues in cognitive psychology and sociobiology concerning the mental capabilities of other species to ideas related to artificial intelligence and to computer science While primary emphasis will be placed upon theoretical conceptual and epistemological aspects of these problems and domains empirical experimental and methodological studies will also appear from time to time One of the most if not the most exciting developments within cognitive science has been the emergence of connectionism as an alternative to the computational conception of the mind that tends to dominate the discipline In this volume John Tienson and Terence Horgan have brought together a fine collection of stimulating studies on connectionism and its significance As the Introduction explains the most pressing questions concern whether or not connectionism can provide a new conception of the nature of mentality By focusing on the similarities and differences between connectionism and other approaches to cognitive science the chapters of this book supply valuable resources that advance our understanding of these difficult issues J H F

Rules, Reason, and Self-Knowledge Julia Tanney, 2013-01-08 Tanney challenges not only the cognitivist approach that has dominated philosophy and the special sciences for fifty years but metaphysical empirical approaches to the mind in general Rules Reason and Self Knowledge advocates a return to the world involving circumstance dependent normative practices where the rational mind has its home **The Blackwell Guide to Philosophy of Mind** Stephen P. Stich, Ted A. Warfield, 2008-04-15 Comprising a series of specially commissioned chapters by leading scholars this comprehensive volume presents an up to date survey of the central themes in the philosophy of mind It leads the reader through a broad range of topics including Artificial Intelligence Consciousness Dualism Emotions Folk Psychology Free Will Individualism Personal Identity and The Mind Body Problem Provides a state of the art overview of philosophy of mind Contains 16 newly commissioned articles all of which are written by internationally distinguished scholars Each chapter reviews a central issue examines the current state of the discipline with respect to the topic and discusses possible futures of the field Provides a solid foundation for further study *What It Is Like To Perceive* J. Christopher Maloney, 2018-06-15 Naturalistic cognitive science when realistically rendered rightly maintains that to think is to deploy contentful mental representations Accordingly

conscious perception memory and anticipation are forms of cognition that despite their introspectively manifest differences may coincide in content Sometimes we remember what we saw other times we predict what we will see Why then does what it is like consciously to perceive differ so dramatically from what it is like merely to recall or anticipate the same Why if thought is just representation does the phenomenal character of seeing a sunset differ so stunningly from the tepid character of recollecting or predicting the sun's descent J Christopher Maloney argues that unlike other cognitive modes perception is in fact immediate direct acquaintance with the object of thought Although all mental representations carry content the vehicles of perceptual representation are uniquely composed of the very objects represented To perceive the setting sun is to use the sun and its properties to cast a peculiar cognitive vehicle of demonstrative representation This vehicle's embedded referential term is identical with and demonstrates the sun itself And the vehicle's self attributive demonstrative predicate is itself forged from a property of that same remote star So in this sense the perceiving mind is an extended mind Perception is unbrokered cognition of what is real exactly as it really is Maloney's theory of perception will be of great interest in the philosophy of mind and cognitive science

Piaget's Theory Harry Beilin, Peter B. Pufall, 2013-04-15 This volume marks the 20th Anniversary Symposium of the Jean Piaget Society Some of the American contributors were among the first to introduce Piaget to developmental and educational psychology in the United States while some of the international contributors worked with Piaget to develop his program of genetic epistemology and continue to make significant contributions to it Within this volume the possibility of Piaget's paradigm is reviewed not only as the stuff of normal science yielding fascinating empirical questions that linger within it but also and more importantly as the stuff of revolutionary science with continuing potential to comprehensively structure our thinking about developmental theory The constructive contribution Piaget's theory has for developmental theory emerges as four central themes in the volume understanding the intentional or semantic aspect of mental life without abandoning the Piagetian assumption that is rational and committed to truth testing examining mental life and its development as a dialectical relation of function and structure a relation Piaget introduced in his study of the developmental relation between procedural and operational knowledge exploring new and interdisciplinary perspectives on equilibration as the driving force of constructive adaptive processes understanding social and historical forces in individual and cultural development not necessarily as forces antithetical to Piaget's perspective but as forces that take on new meaning within his framework which avoids erroneous dichotomies such as the distinction between subjective and objective knowledge

Representations, Targets, and Attitudes Robert Cummins, 1996 What is it for something in the mind to represent something Distinguished philosopher of mind Robert Cummins looks at the familiar problems of representation theory what information is represented in the mind what form mental representation takes how representational schemes are implemented in the brain what it is for one thing to represent another from an unprecedented angle Instead of following the usual procedure of defending a version of indicator semantics Cummins begins with a theory of representational error and

uses this theory to constrain the account of representational content. Thus the problem of misrepresentation which plagues all other accounts is avoided at the start. Cummins shows that representational error can be accommodated only if the content of a representation is intrinsic independent of its use and causal role in the system that employs it. Cummins's theory of error is based on the teleological idea of a target: an intentional concept but one that differs importantly from that of an ordinary intentional object. Using this notion he offers a schematic theory of representation and an account of propositional attitudes that takes exception with some popular positions such as conceptual role semantics. Fodor's representational theory of the mind and Putnam's twin earth examples. A Bradford Book. Representation and Mind series. Representation in Mind Hugh Clapin, Phillip Staines, Peter Slezak, 2004-06-04. Representation in Mind is the first book in the new series Perspectives on Cognitive Science and includes well known contributors in the areas of philosophy of mind, psychology and cognitive science. The papers in this volume offer new ideas, fresh approaches and new criticisms of old ideas. The papers deal in new ways with fundamental questions concerning the problem of mental representation that one contributor Robert Cummins has described as THE problem in philosophy of mind for some time now. The editors' introductory overview considers the problem for which mental representation has been seen as an answer, sketching an influential framework outlining some of the issues addressed and then providing an overview of the papers. Issues include the relation between mental representation and public non mental representation, misrepresentation, the role of mental representations in intelligent action, the relation between representation and consciousness, the relation between folk psychology and explanations invoking mental representations. Deconstructing the Mind Stephen P. Stich, 1998. In Deconstructing the Mind, distinguished philosopher Stephen Stich, once a leading advocate of eliminativism, offers a bold and compelling reassessment of this view.

Multidisciplinary Perspectives on Representational Pluralism in Human Cognition Michel Bélanger, Patrice Potvin, Steven Horst, Andrew Shtulman, Eduardo F. Mortimer, 2022-07-18. Bringing together diverse theoretical and empirical contributions from the fields of social and cognitive psychology, philosophy and science education, this volume explores representational pluralism as a phenomenon characteristic of human cognition. Building on these disciplines' shared interest in understanding human thought, perception and conceptual change, the volume illustrates how representational plurality can be conducive to research and practice in varied fields. Particular care is taken to emphasize points of convergence and the value of sharing discourses, models, justifications and theories of pluralism across disciplines. The editors give ample space for philosophers, cognitive scientists and educators to explicate the history and current status of representational pluralism in their own disciplines. Using multiple forms of research from the relational perspective, this volume will be of interest to students, scholars and researchers with an interest in cognitive psychology as well as educational psychology and philosophy of science. **The Logical Foundations of Cognition** John Macnamara, Gonzalo E. Consciousness An Introduction and Assessment provides a fresh and up to date introduction to a variety of approaches to consciousness and contributes to the current lively debate about the nature of consciousness and whether a scientific understanding of it is possible After an initial overview of the status and prospects of physicalism in the face of the problem of consciousness William Seager explores key themes from Descartes the founder of the modern problem of consciousness He then turns to the most important theories of consciousness identity theories and the generation problem higher order thought theories of consciousness self representational theories of consciousness Daniel Dennett s theory of consciousness attention based theories of consciousness representational theories of consciousness conscious intentionality panpsychism neutral monism Thoroughly revised and expanded throughout this second edition includes new chapters on animal consciousness reflexive consciousness combinatorial forms of panpsychism and neutral monism as well as a significant new chapter on physicalism emergence and consciousness The book s broad scope depth of coverage and focus on key philosophical positions and arguments make it an indispensable text for those teaching or studying philosophy of mind and psychology It is also an excellent resource for those working in related fields such as cognitive science and the neuroscience of consciousness

The World in the Head Robert Cummins, 2010-01-28 The World in the Head collects the best of Robert Cummins papers on mental representation and psychological explanation Running through these papers are a pair of themes that explaining the mind requires functional analysis not subsumption under psychological laws and that the propositional attitudes belief desire intention and their interactions while real are not the key to understanding the mind at a fundamental level Taking these ideas seriously puts considerable strain on standard conceptions of rationality and reasoning on truth conditional semantics and on our interpretation of experimental evidence concerning cognitive development learning and the evolution of mental traits and processes The temptation to read the structure of mental states and their interactions off the structure of human language is powerful and seductive but has created a widening gap between what most philosophers and social scientists take for granted about the mind and the framework we need to make sense what an accelerating biology and neuroscience are telling us about brains The challenge for the philosophy of mind is to devise a framework that accommodates these developments This is the underlying motivation for the papers in this collection
