Mechanics of Materials William F. Riley,Leroy D. Sturges,Don H. Morris,2006-02-24 This leading book in the field focuses on what materials specifications and design are most effective based on function and actual load carrying capacity Written in an accessible style it emphasizes the basics such as design equilibrium material behavior and geometry of deformation in simple structures or machines Readers will also find a thorough treatment of stress strain and the stress strain relationships These topics are covered before the customary treatments of axial loading torsion flexure and buckling **Mechanical Materials** Russell C. method at the undergraduate level a prudent mix of theory and applications is often sought In many cases analysts use the finite element method to perform parametric studies on potential designs to size parts weed out less desirable design scenarios and predict system behavior under load In this book we discuss common pitfalls encountered by many finite element analysts in particular students encountering the method for the first time We present a variety of simple problems in axial bending torsion and shear loading that combine the students knowledge of theoretical mechanics numerical methods and approximations particular to the finite element method itself We also present case studies in which analyses are coupled with experiments to emphasize validation illustrate where interpretations of numerical results can be misleading and what can be done to allay such tendencies Challenges in presenting the necessary mix of theory and applications in a typical undergraduate course are discussed We also discuss a list of tips and rules of thumb for applying the method in practice Table of Contents Preface Acknowledgments Guilty Until Proven Innocent Let s Get Started Where We Begin to Go Wrong It s Only a Model Wisdom Is Doing It Summary Afterword Bibliography Authors Biographies *Advanced Mechanics of Materials, Solutions Manual* Robert Davis Cook,1985 **Solutions Manual to Accompany Mechanics of Materials** Daryl L.
