The Lives of Animals J. M. Coetzee,2016-09-20 The idea of human cruelty to animals so consumes novelist Elizabeth Costello in her later years that she can no longer look another person in the eye humans especially meat eating ones seem to her to be conspirators in a crime of stupefying magnitude taking place on farms and in slaughterhouses factories and laboratories across the world Costello s son a physics professor admires her literary achievements but dreads his mother s lecturing on animal rights at the college where he teaches His colleagues resist her argument that human reason is overrated and that the inability to reason does not diminish the value of life his wife denounces his mother s vegetarianism as a form of moral superiority At the dinner that follows her first lecture the guests confront Costello with a range of sympathetic and skeptical reactions to issues of animal rights touching on broad philosophical anthropological and religious perspectives Painfully for her son Elizabeth Costello seems offensive and flaky but dare he admit it strangely on target In this landmark book Nobel Prize winning writer J M Coetzee uses fiction to present a powerfully moving discussion of animal rights in all their complexity He draws us into Elizabeth Costello s own sense of mortality her compassion for animals and her alienation from humans even from her own family In his fable presented as a Tanner Lecture sponsored by the University Center for Human Values at Princeton University Coetzee immerses us in a drama reflecting the real life situation at hand a writer delivering a lecture on an emotionally charged issue at a prestigious university Literature philosophy performance and deep human conviction Coetzee brings all these elements into play As in the story of Elizabeth Costello the Tanner Lecture is followed by responses treating the reader to a variety of perspectives delivered by leading thinkers in different fields Coetzee s text is accompanied by an introduction by political philosopher Amy Gutmann and responsive essays by religion scholar Wendy Doniger primatologist Barbara Smuts literary theorist Marjorie Garber and moral philosopher Peter Singer author of

Animal Liberation Together the lecture fable and the essays explore the palpable social consequences of uncompromising moral conflict and confrontation

Life With Darwin and other baboons Fransje van Riel, 2012-10-02 Baboons are neither devils nor saints but animals who like us have very individual personalities experience a wide range of emotions and possess a capacity for reasoning These are the words of Kobie Kruger best selling wildlife author in her foreword to Life with Darwin Of all the primates in Africa the Chacma Baboon has arguably received the least attention in terms of comprehensive behavioural studies Life with Darwin is an account of the work of Karin Saks who through fostering orphaned baby baboons and attempting to rehabilitate them back into the wild had the opportunity to observe and record the activities of a number of wild baboon troops Through her daily interaction with them she brings fresh perspectives to our knowledge of an animal society that is both complex and well ordered It is a fresh and accessible look at a species that has not always been sympathetically regarded and its insights go a long way towards redressing this attitude

A Primate's Memoir Robert M. Sapolsky, 2007-11-01 In the tradition of Jane Goodall and Dian Fossey Robert Sapolsky a foremost science writer and recipient of a MacArthur Genius Grant tells the mesmerizing story of his twenty one years in remote Kenya with a troop of savanna baboons I had never planned to become a savanna baboon when I grew up instead I had always assumed I would become a mountain gorilla writes Robert Sapolsky in this witty and riveting chronicle of a scientist's coming of age in Africa An exhilarating account of Sapolsky's twenty one year study of a troop of rambunctious baboons in Kenya *A Primate's Memoir* interweaves serious scientific observations with wry commentary about the challenges and pleasures of living in the wilds of the Serengeti for man and beast alike Over two decades Sapolsky survives culinary atrocities gunpoint encounters and a surreal kidnapping while witnessing the encroachment of the tourist mentality on Africa As he conducts unprecedented physiological research on wild primates he becomes enamored of his subjects unique and compelling characters in their own right and he returns to them summer after summer until tragedy finally prevents him By turns hilarious and poignant *A Primate's Memoir* is a magnum opus from one of our foremost science writers

In Quest of the Sacred Baboon Hans Kummer, 2017-03-14 In a tale that begins at a zoo in Zurich and takes us across the deserts of Ethiopia to the Asir Mountains in Saudi Arabia Hans Kummer recreates the adventure and intellectual thrill of the early days of field research on primates Just as Jane Goodall and Dian Fossey introduced readers to the fascinating lives of chimpanzees and gorillas Kummer brings us face to face with the Hamadryas baboon With their furry white mantles and gleaming red hindquarters the Hamadryas appear frequently in the art of the ancient Egyptians who may have interpreted the baboons early morning grooming rituals as sun worshipping rites Back then Hamadryas were thought to be incarnates of Thoth the god of wisdom today they are considered to have one of the most highly structured social systems among primates very close in some respects to that of humans In the 1960s Kummer after conflicts with nomadic warriors managed to track down these elusive baboons near the Danakil Desert and then followed them from dawn to dusk on their treks from one feeding place to another His scientific

account of this period reads like a travel memoir as he describes his encounters with the Hamadryas and the people with whom they share the desert. Winding his way through cliffs and scrub, Kummer records the baboons' social life from the development of pair relationships to the way an entire group decides where to march each day. Much like the human nomads who cope with the harsh demands of the desert environment, the Hamadryas maintain a society that is strict and patriarchal in its details but multilayered and flexible in its largest units. We learn, for example, of the Hamadryas' respect for possession that protects family structure and of the cohesion among family leaders that lessens the threat of battle. At the same time, clear-cut personalities emerge from Kummer's account, drawing us into the life stories and power struggles of individual baboons. Whereas this rich detail holds many implications for natural scientists, the colorful way it comes to life makes for a compelling book bound to entertain and educate all readers. Smuts, Those who have been privileged to watch baboons long enough to know them as individuals and who have learned to interpret some of their more subtle interactions will attest that the rapid flow of baboon behavior can at times be overwhelming In fact some of the most sophisticated and influential observation methods for sampling vertebrate social behavior grew out of baboon studies invented by scientists who were trying to cope with the intricacies of baboon behavior Barbara Smuts eloquent study of baboons reveals a new depth to their behavior and extends the theories needed to account for it While adhering to the most scrupulous methodological strictures the author maintains an open research strategy respecting her subjects by approaching them with the open mind of an ethnographer and immersing herself in the complexities of baboon social life before formulating her research design allowing her to detect and document a new level of subtlety in their behavior At the Gilgil site described in this book she could stroll and sit within a few feet of her subjects By maintaining such proximity she was able to watch and listen to intimate exchanges within the troop she was able in other words to shift the baboons well along the continuum from subject to informant By doing so she has illuminated new networks of special relationships in baboons This empirical contribution accompanies theoretical insights that not only help to explain many of the inconsistencies of previous studies but also provide the foundation for a whole new dimension in the study of primate behavior analysis of the dynamics of long term intimate relationships and their evolutionary significance At every stage of research human observers have underestimated the baboon These intelligent curious emotional and long lived creatures are capable of employing stratagems and forming relationships that are not easily detected by traditional research methods In the process of unraveling their complex social relationships Smuts has revealed that these masters of strategy and aggressive competition are equally capable of patience tenderness and concern Barbara B Smuts is professor of psychology and anthropology University of Michigan Ann Arbor She is also the author of Primate Societies **The Arrogant**

Ape Christine Webb, 2025-09-02 An impassioned celebration of humility before the living world that leads us to a new understanding of other species and ourselves Darwin considered humans one part of the web of life not the apex of a natural hierarchy Yet today many maintain that we are the most intelligent virtuous successful species that ever lived This flawed thinking enables us to exploit the earth towards our own exclusive ends throwing us into a perilous planetary imbalance But is this view and way of life inevitable The Arrogant Ape shows that human exceptionalism is an ideology that relies more on human culture than our biology more on delusion and faith than on evidence Harvard primatologist Christine Webb has spent years researching the rich social emotional and cognitive lives of our closest living relatives She exposes the ways that many scientific studies are biased against other species and reveals underappreciated complexities of nonhuman life from the language of songbirds and prairie dogs to the cultures of chimpanzees and reef fishes to the acumen of plants and fungi With compelling stories and fresh research she gives us a paradigm shifting way of looking at other organisms on their own terms one that is revolutionizing our perception both of them and of ourselves Critiques of human exceptionalism tend to focus on our moral obligation towards other species They overlook what humanity also stands to gain by dismantling its illusions of uniqueness and superiority This shift in perspective fills us with a sense of awe and satisfies one of our oldest and deepest desires to belong to the larger whole we inhabit What is at stake is a better sustainable way of life with the potential to heal and rejuvenate our shared planet
