

The Mystery Powders Lab: Physical and Chemical Changes

Oh no! This seems to be a new substance. It must be a chemical change.

Background Information: You have learned how to describe matter based on its physical and chemical properties. You have also learned some clues that tell you whether a physical change or a chemical change is occurring. Remember a physical change involves a change in a physical property but the substance does not change its identity. When a chemical change occurs a new substance is produced. There are hints like a color change or fizzing (a gas) that indicate a chemical change has taken place because a new substance is produced.

Objective: To determine the identity of four mystery powders which are similar in appearance by *observing a physical property (solubility) and a chemical property (reactivity)*. You will also determine whether mixing these "mystery powders" with water, vinegar or iodine causes a physical or chemical change.
