are increasingly turning to an exciting new branch of management known as corporate sustainability management CSM to help them better understand and manage their non financial performance Indeed what we are witnessing is nothing less than the birth of a new management function The main pillar of CSM is the Triple Bottom Line TBL which has been successful as an organizing principle but a disappointment in practice This is largely due to the absence of sustainability context in related measurement management and reporting efforts when for example the monitoring of a company s use of freshwater resources fails to take into account the size of related supplies This book is the first to introduce a systematic means of including context in sustainability management and doing effective CSM After making the case for why context matters the book explains how to do context based CSM by providing a stepwise cyclical blueprint for how to practice it in any organization This includes a template for context based metrics compatible with the Global Reporting Initiative GRI as well as specific examples of metrics for each of the triple bottom lines Practical examples of best practices are presented throughout while simultaneously addressing key issues such as how organizations can measure performance against context based standards when consensus for such standards does not yet exist Appendices include tools for developing and applying context based metrics as well as case studies taken from the practice of context based CSM at two companies in the United States This guide is the essential tool for business and organizational leaders in all sectors committed to improving their sustainability performance with a particular emphasis on measurement management and reporting
