CD to complete the offering      Astrocytes and Epilepsy Jacqueline A. Hubbard, Devin K. Binder, 2016-07-05 Epilepsy is a devastating group of neurological disorders characterized by periodic and unpredictable seizure activity in the brain There is a critical need for new drugs and approaches given that at least one third of all epilepsy patients are not made free of seizures by existing medications and become medically refractory Much of epilepsy research has focused on neuronal therapeutic targets but current antiepileptic drugs often cause severe cognitive developmental and behavioral side effects Recent findings indicate a critical contribution of astrocytes star shaped glial cells in the brain to neuronal and network excitability and seizure activity Furthermore many important cellular and molecular changes occur in astrocytes in epileptic tissue in both humans and animal models of epilepsy The goal of *Astrocytes and Epilepsy* is to comprehensively review exciting findings linking changes in astrocytes to functional changes responsible for epilepsy for the first time in book format These insights into astrocyte contribution to seizure susceptibility indicate that astrocytes may represent an important new therapeutic target in the control of epilepsy *Astrocytes and Epilepsy* includes background explanatory text on astrocyte morphology and physiology epilepsy models and syndromes and evidence from both human tissue studies and animal models linking functional changes in astrocytes to epilepsy Beautifully labelled diagrams are presented and relevant figures from the literature are reproduced to elucidate key findings and concepts in this rapidly emerging field *Astrocytes and Epilepsy* is written for neuroscientists epilepsy researchers astrocyte investigators as well as neurologists and other specialists caring for patients with epilepsy Presents the first comprehensive book to synthesize historical and recent research on astrocytes and epilepsy into one coherent volume Provides a great resource on the field of astrocyte biology and astrocyte neuron interactions Details potential therapeutic targets including chapters on gap junctions water and potassium channels glutamate and adenosine metabolism and inflammation      **Myelin Repair: At the Crossing-Lines of Myelin Biology and Gene Therapy** Matthias Klugmann, Dominik Fröhlich, Dominic J.
