Photographic illustrations in these fields must satisfy criteria of clarity, objectivity, and adherence to accepted standards, in addition to a pleasant but not distracting composition and illumination. This book concentrates on the choice and practical use of digital cameras, lenses, and related equipment of types commonly available at research institutions and museums. The described techniques are suitable for subject sizes between approximately half a millimeter and half a meter and differ from those used in general photography and microscopy. The intended audience of this book includes professional scientific photographers, scientists, and students who need to carry out photography in support of their own research or as part-time scientific photographers at a research institution and advanced amateur photographers who wish to master these techniques.
