This examination of the heroic journey in world mythology casts the protagonist as a personification of nature, a botanical hero, one might say, who begins the quest in a metaphorical seed-like state, then sprouts into a period of verdant strength. But the hero must face a mythic underworld where he or she contends with mortality and sacrifice, embracing death as a part of life. For centuries, humans have sought superiority over nature, yet the botanical hero finds nothing is lost by recognizing that one is merely a part of nature. Instead, a cyclical promise of continuous life is realized in which no element fully disappears, and the hero's message is not to dwell on death. The Lessons of Nature in Mythology Rachel S. McCoppin, 2015-10-30. This examination of myths from around the world focuses on the role nature plays within mythology. Creation myths from myriad cultures recognized that life arose from natural elements, inextricably connecting human life to the natural world. Nature, as portrayed in myth, is unpredictable and destructive but also redemptive, providing solace and wisdom. Mythology relates the human life cycle to the seasons, with spring, summer, fall, and winter as metaphors for birth, adulthood, old age, and death. The author identifies divinities who were direct representations of natural phenomena. The transition of mythic representations from the Paleolithic to Neolithic period is discussed. Goddess Lost Rachel S. McCoppin, 2023-02-13. Drawing upon historical, archaeological, and mythical examples from around the world, this book reveals how societal views of female empowerment and authority can be directly traced to the reverence once directed towards female warriors, priestesses, healers, queens, pharaohs, and goddesses. Communities which revered women as

sacred idols of their belief systems were far more likely to place women in prominent positions of social or political influence since their members were quite used to envisioning power in the hands of a strong or divine woman The book also explores how goddesses were purposefully devalued during the rise of patriarchal civilizations thus restricting the social importance of earthly women and their accompanying rights One such instance can be found in Greek mythology s Gaia once revered as a dominant earth mother she was replaced by a division of less powerful figures with more socially acceptable feminine roles such as Aphrodite the goddess of love typically held up as an object of male lust Hera the goddess of marriage and childbirth often portrayed as obsessed with jealousy over the extramarital exploits of her husband and the mostly silent goddess of the hearth Hestia The devaluing of once revered goddesses appeared in quite distinct ways across different cultures thus this book breaks down its chapters by global region including Europe the Middle East the Mediterranean India Asia Africa the Americas and Oceania

World Myth or History? J.G. Nonequilibrium Statistical Thermodynamics Bernard H. Lavenda, 2019-04-17 This book develops in detail the statistical foundations of nonequilibrium thermodynamics based on the mathematical theory of Brownian motion Author Bernard H Lavenda demonstrates that thermodynamic criteria emerge in the limit of small thermal fluctuations and in the Gaussian limit where means and modes of the distribution coincide His treatment assumes the theory of Brownian motion to be a general and practical model of irreversible processes that are inevitably influenced by random thermal fluctuations This unifying approach permits the extraction of widely applicable principles from the analysis of specific models Arranged by argument rather than theory the text is based on the premises that random thermal fluctuations play a decisive role in governing the evolution of nonequilibrium thermodynamic processes and that they can be viewed as a dynamic superposition of many random events Intended for nonmathematicians working in the areas of nonequilibrium thermodynamics and statistical mechanics this book will also be of interest to chemical physicists condensed matter physicists and readers in the area of nonlinear optics
