Babits, Douglas Dowell Scott, David G. Orr, 2010-12-15

The recent work of anthropologists historians and historical archaeologists has changed the very essence of military history While once preoccupied with great battles and the generals who commanded the armies and employed the tactics military history has begun to emphasize the importance of the common man for interpreting events As a result military historians have begun to see military forces and the people serving in them from different perspectives *The Historical Archaeology of Military Sites* has encouraged efforts to understand armies as human communities and to address the lives of those who composed them Tying a group of combatants to the successes and failures of their military commanders leads to a failure to understand such groups as distinct social units and in some instances self supporting societies structured around a defined social and political hierarchy regulated by law needing to be supplied and nurtured and often at odds with the human community whose lands they occupied be they those of friend or foe *The Historical Archaeology of Military Sites* will afford students professionals dealing with military sites and the interested public examples of the latest techniques and proven field methods to aid understanding and conservation of these vital pieces of the world s heritage *Metal Detecting* Sophie Henner, Metal detecting involves using a metal detector an electronic device designed to find metal objects nearby These devices vary in form from handheld wands to large industrial machines The main components of a metal detector include the control box which houses the electronic circuitry controls and batteries the search coil also known as the antenna which senses metal objects the shaft which connects the search coil to the control box and is often adjustable for comfort and sometimes a stabilizer to keep the unit steady during use The search coil generates an electromagnetic field and when this field encounters a metal object it creates a disturbance The control box processes this disturbance and sends a signal to the user typically an audible beep or a visual display Metal detecting is used for various purposes including treasure hunting where individuals search for coins jewelry relics and other valuable items lost or buried archaeology to locate historical artifacts at dig sites security for scanning individuals or luggage for concealed weapons or contraband and construction to detect metal pipes or rebar in walls floors or underground It is also a popular hobby for enthusiasts who explore parks beaches and other areas for interesting finds **The Gold Rush Metal Detector's Handbook** Barrett Williams, ChatGPT, 2025-06-06
