polymeric materials is widely explored from both an engineering and a nutraceutical point of view. Regarding the engineering application, researchers have discovered the most suitable materials for intelligent packaging which preserves the food quality and prolongs the shelf life of the products. Furthermore, in agriculture, specific functionalized polymers are used to increase the efficiency of treatments and reduce the environmental pollution. In the nutraceutical field, because consumers are increasingly conscious of the relationship between diet and health, the consumption of high quality foods has been growing continuously. Different compounds, e.g. high quality proteins, lipids and polysaccharides, are well known to contribute to the enhancement of human health by different mechanisms, reducing the risk of cardiovascular disease, coronary disease and hypertension. This first volume of this two volume book concerns the application of polymers in food packaging. Food Losses, Sustainable Postharvest and Food Technologies Charis M. Galanakis, 2021-05-19. The urgent need for sustainability within the food producing industries and agriculture has turned the interest of research to investigate new non thermal technologies, nanotechnologies and other practices in postharvest treatment of crops and fruits. Subsequently, there is a need for a new guide covering the latest developments in this particular direction. Food Losses, Sustainable Postharvest and Food Technology provides solutions to postharvest treatment technologies. It explores modern non thermal technologies focusing on postharvest losses and quality of fresh cut products. In addition, it discusses the implications for postharvest technology, research policies and practices. It also focuses on the most recent advances in the field while it explores the potentiality and sustainability of already commercialized processes and products. Aimed at professionals working in the food industry and agriculture, it could also be utilized as a handbook for anyone dealing with sustainability issues of food production in spite of postharvest treatment. Thoroughly explores modern non thermal technologies in postharvest treatment. Discusses the implications for postharvest technology, research policies and practices. Analyzes the potentiality and sustainability of already commercialized processes and products. **Ion Exchange Technologies** Ayben Kilislioglu, 2012-11-07. Hartree-Fock-Slater Method for Materials Science Hirohiko Adachi,Takeshi Mukoyama,Jun Kawai,2006-03-08 Molecular orbital calculations for materials design such as alloys ceramics and coordination compounds are now possible for experimentalists Molecular orbital calculations for the interpretation of chemical effect of spectra are also possible for experimentalists The most suitable molecular orbital calculation method for these purpose is the DV Xa method which is robust in such a way that the calculation converges to a result even if the structure of the molecule or solid is impossible in the pressure and temperature ranges on earth This book specially addresses the methods to design novel materials and to predict the spectralline shape of unknown materials using the DV Xa molecular orbital method but is also useful for those who want to calculate electronic structures of materials using any kind of method **Introduction to Wave Scattering, Localization and Mesoscopic Phenomena** Ping Sheng,2006-08-25 Waves represent an important topic of study in physics mathematics and engineering This volume is a resource book for those interested in understanding the physics underlying nanotechnology and mesoscopic phenomena It aims to bridge the gap between the textbooks and research frontiers in wave related topics **Plastics for Corrosion Inhibition** V.A. Goldade,L.S. Pinchuk,A.V. Makarevich,V.N. Kestelman,2006-03-30 One of the key problems of failure free operation of machinery is prevention of corrosion The global scale of modern production makes this problem even more critical At the beginning of the 21st century industrial contamination and the

corrosion active nature of the environment reached a level such that corrosive damage of materials became commensurate with their production volume and expenditure on anticorrosion protection of machines became comparable with investments in basic production. Anticorrosion techniques changed from being an auxiliary service to industrial enterprises into a developing scientifically intensive and generously financed branch of production. Polymers occupy a very specific place amongst anticorrosion techniques. Polymers combine good chemical resistance with impermeability to different media and unusual deformation characteristics. The main principle of their application as anticorrosion means is the creation of a tight barrier that insulates metal machine parts or constructions from corrosion agents. The advantages of polymers allow the creation of such a barrier at minimal cost providing protection of the working machines from corrosion combining their manufacture with preservation and decreasing the cost of anticorrosion. This is one of the main reasons why world production of polymer materials increased by almost 50% in the past decade.

Spectroscopic Properties of Rare Earths in Optical Materials

Guokui Liu, Bernard Jacquier, 2006-01-29. Aimed at researchers and graduate students this book provides up to date information about the electronic interactions that impact the optical properties of rare earth ions in solids.
