Conserving Plant Genetic Diversity in Protected Areas José María Iriondo, Nigel Maxted, Mohammad Ehsan Dulloo, 2008 Conservation in protected areas has focused on preserving biodiversity of ecosystems and species whereas conserving the genetic diversity contained within species has historically often been ignored However maintaining genetic diversity is fundamental to food security and the provision of raw materials and it is best preserved within plants natural habitats This is particularly true for wild plants that are directly related to crop species and can play a key role in providing beneficial traits such as pest or disease resistance and yield improvement These wild relatives are presently threatened due to processes of habitat destruction and change and methodologies have been adapted to provide in situ conservation through the establishment of genetic reserves within the existing network of protected areas Providing a long awaited synthesis of these new methodologies this book presents a practical set of management guidelines that can be used for the conservation of plant genetic diversity of crop wild relatives in protected areas

Approaches to Plant Evolutionary Ecology G.P. Cheplick, 2015-06-01 Plant evolutionary ecology is a rapidly growing discipline which emphasizes that populations adapt and evolve not in isolation but in relation to other species and abiotic environmental features such as climate Although it departs from traditional evolutionary and ecological fields of study the field is connected to branches of ecology genetics botany conservation and to a

number of other fields of applied science primarily through shared concepts and techniques. However, most books regarding evolutionary ecology focus on animals, creating a substantial need for scholarly literature with an emphasis on plants. *Approaches to Plant Evolutionary Ecology* is the first book to specifically explore the evolutionary characteristics of plants, filling the aforementioned gap in the literature on evolutionary ecology. Renowned plant ecologist Gregory P. Cheplick summarizes and synthesizes much of the primary literature regarding evolutionary ecology, providing a historical context for the study of plant populations from an evolutionary perspective. The book also provides summaries of both traditional common gardens, reciprocal transplants, and modern molecular genetic approaches used to address questions about plant adaptation to a diverse group of abiotic and biotic factors. Cheplick provides a rigorously written introduction to the rapidly growing field of plant evolutionary ecology that will appeal to undergraduate and graduate students with an interest in ecology and evolution, as well as educators who are teaching courses on related topics.

Reproductive Allocation in Plants Edward Reekie, Fakhri A. Bazzaz, 2011-05-04. Much effort has been devoted to developing theories to explain the wide variation we observe in reproductive allocation among environments. *Reproductive Allocation in Plants* describes why plants differ in the proportion of their resources that they allocate to reproduction and looks into the various theories. This book examines the ecological and evolutionary explanations for variation in plant reproductive allocation from the perspective of the underlying physiological mechanisms controlling reproduction and growth. An international team of leading experts have prepared chapters summarizing the current state of the field and offering their views on the factors determining reproductive allocation in plants. This will be a valuable resource for senior undergraduate students, graduate students, and researchers in ecology, plant ecophysiology, and population biology. 8 outstanding chapters dedicated to the evolution and ecology of variation in plant reproductive allocation. Written by an international team of leading experts in the field. Provides enough background information to make it accessible to senior undergraduate students. Includes over 60 figures and 29 tables.

Biodiversity and Insect Pests Geoff M. Gurr, Stephen D. Wratten, William E. Snyder, 2012-04-12. Biodiversity offers great potential for managing insect pests. It provides resistance genes and anti-insect compounds, a huge range of predatory and parasitic natural enemies of pests, and community ecology level effects operating at the local and landscape scales to check pest build-up. This book brings together world leaders in theoretical, methodological, and applied aspects to provide a comprehensive treatment of this fast-moving field. Chapter authors from Europe, Asia, Africa, Australasia, and the Americas ensure a truly international scope. Topics range from scientific principles, innovative research methods, ecological economics, and effective communication to farmers, as well as case studies of successful use of biodiversity-based pest management, some of which extend over millions of hectares or are enshrined as government policy. Written to be accessible to advanced undergraduates whilst also stimulating the seasoned researcher, this work will help unlock the power of biodiversity to deliver sustainable insect pest management. Methods for Risk Assessment of Transgenic Plants Gösta Kjellsson, Vibeke Simonsen, Klaus Ammann, 2012-12-06 The present work is a continuation of the work initiated in Autumn 1991 which resulted in the book published by Birkhauser Verlag in 1994 entitled *Methods for Risk Assessment of Transgenic Plants I Competition Establishment and Ecosystem Effects* Already when the work on volume 1 started it was obvious to the authors that not only the physical establishment of a transgenic plant outside the cultivated area was important for risk assessment but also the possible gene transfer from transgenic plants to other plants had to be considered It was then decided to write a second volume on test methods as a complement to the first covering the main topics Pollination gene transfer and population impacts The main user groups for this volume are scientists and students working with plant population genetics and risk assessment and administrators with responsibility for legislation of transgenic plants In order to cover such a broad range of topics specialist knowledge was required Therefore colleagues in Denmark and Switzerland working in these fields in relation to the concerns of using transgenic plants were asked to participate The result was a Danish Swiss cooperation A list of contributors to the book and their addresses is shown on p VII Financial support which made the work possible was given by The National Environmental Research Institute Denmark the Federal Office of Environment Forest and Landscape Switzerland the National Forest and Nature Agency Denmark the Danish Environmental Protection Agency and the European Commission DC XI Grasses and
