Translating Diverse Environmental Data into Reliable Information How to Coordinate Evidence from Different Sources is a resource for building environmental knowledge particularly in the era of Big Data Environmental scientists engineers educators and students will find it essential to determine data needs assess their quality and efficiently manage their findings Decision makers can explore new open access databases and tools especially portals and dashboards The book demonstrates how environmental knowledgebases are and can be built to meet the needs of modern students and professionals Topics covered include concepts and principles that underpin air water and other public health and ecological topics Integrated and systems perspectives are woven throughout with clues on how to build and apply interdisciplinary data which can increasingly be obtained from sources ranging from peer reviewed research appearing in scientific journals to information gathered by citizen scientists This opens the door to using vast amounts of open data and the necessary quality assurance and metadata considerations for their countless applications Provides tools to manage data of varying sizes and quality Identifies both opportunities and cautions in using other people s data Updates physical chemical and biological factors that

must be considered in risk evaluations and life cycle assessments Applies to data collected by academic governmental businesses and citizen scientists across environmental systems Improves readers ability to organize and visualize their work in the age of Big Data     **Data Bases and Data Base Systems Related to NASA's Aerospace Program** ,1983
