An Introduction to

Multilevel Modeling Techniques Ronald Heck, Scott L. Thomas, 2020-03-24 Multilevel modelling is a data analysis method that is frequently used to investigate hierarchical data structures in educational behavioural health and social sciences disciplines Multilevel data analysis exploits data structures that cannot be adequately investigated using single level analytic methods such as multiple regression path analysis and structural modelling This text offers a comprehensive treatment of multilevel models for univariate and multivariate outcomes It explores their similarities and differences and demonstrates why one model may be more appropriate than another given the research objectives New to this edition An expanded focus on the nature of different types of multilevel data structures e.g. cross sectional longitudinal cross classified etc for addressing specific research goals Varied modelling methods for examining longitudinal data including random effect and fixed effect approaches Expanded coverage illustrating different model building sequences and how to use results to identify possible model improvements An expanded set of applied examples used throughout the text Use of four different software packages i.e. Mplus R SPSS Stata with selected examples of model building input files included in the chapter appendices and a more complete set of files available online This is an ideal text for graduate courses on multilevel longitudinal latent variable modelling multivariate statistics or advanced quantitative techniques taught in psychology business education health and sociology Recommended prerequisites are introductory univariate and multivariate statistics

Educational

Effectiveness Theory Katharina Maag Merki, Marcus Emmerich, Monika Holmeier, 2018-10-11 Despite the advances in educational effectiveness theory and methodology in the last 20 years important questions and issues remain unresolved In particular existing theoretical frameworks of educational effectiveness are only able to describe the interrelationship among factors at the system school classroom and student levels and their cross level interdependency in a very general manner Additionally although a large number of studies provide empirical evidence of the impact of single factors and factor constellations on student learning the embedding of the empirically identified results in theoretical models of educational effectiveness has to be carried out more systematically in order to develop more elaborated theories of educational effectiveness The aim of this book is to contribute to the advancement of educational effectiveness theory by discussing different strategies including alternative theoretical models to understand educational in effectiveness extending the methodology to analyze processes and mechanisms of educational in effectiveness analyzing differential effects of processes and instruments on educational in effectiveness carrying out complex multivariate analyses considering manifest and latent variables and combining theory and practice in real school situations Taken together the strategies presented in this book make it clear that the advancement of educational effectiveness theory depends on the advancement of educational effectiveness methodology or in other words from theory to methodology and from empirical evidence back to theory This book was originally published as a special issue of School Effectiveness and School Improvement

McArdle, Gilbert Ritschard, 2013-08-15 This book reviews the latest techniques in exploratory data mining EDM for the analysis of data in the social and behavioral sciences to help researchers assess the predictive value of different combinations of variables in large data sets Methodological findings and conceptual models that explain reliable EDM techniques for predicting and understanding various risk mechanisms are integrated throughout Numerous examples illustrate the use of these techniques in practice Contributors provide insight through hands on experiences with their own use of EDM techniques in various settings Readers are also introduced to the most popular EDM software programs A related website at <http://mephisto.unige.ch/pub/edm/book/supplement/> offers color versions of the book's figures a supplemental paper to chapter 3 and R commands for some chapters The results of EDM analyses can be perilous they are often taken as predictions with little regard for cross validating the results This carelessness can be catastrophic in terms of money lost or patients misdiagnosed This book addresses these concerns and advocates for the development of checks and balances for EDM analyses Both the promises and the perils of EDM are addressed Editors McArdle and Ritschard taught the Exploratory Data Mining Advanced Training Institute of the American Psychological Association APA All contributors are top researchers from the US and Europe Organized into two parts methodology and applications the techniques covered include decision regression and SEM tree models growth mixture modeling and time based categorical sequential analysis Some of the applications of EDM and the corresponding data

explored include selection to college based on risky prior academic profiles the decline of cognitive abilities in older persons global perceptions of stress in adulthood predicting mortality from demographics and cognitive abilities risk factors during pregnancy and the impact on neonatal development Intended as a reference for researchers methodologists and advanced students in the social and behavioral sciences including psychology sociology business econometrics and medicine interested in learning to apply the latest exploratory data mining techniques Prerequisites include a basic class in statistics

Equity and Quality Dimensions in Educational Effectiveness Leonidas Kyriakides,Bert Creemers,Evi Charalambous,2018-01-03 This book aims to make a contribution to the theory research and practice on quality and equity in education by providing a comprehensive overview of these two dimensions of educational effectiveness and proposing a methodological instrument that may be used

to measure the contribution that each school can make to promoting equity The importance of using this instrument is demonstrated by analysing results of various effectiveness studies conducted over the last decade The book draws upon research across the world especially research conducted in the Europe the United States and Australasia It is shown that promoting equity has no negative effect on the promotion of quality The importance of using this methodological instrument to identify factors that promote both quality and equity at different educational levels i e teacher school and educational system is stressed The book also demonstrates how we can measure stability and changes in the effectiveness status of schools over time in terms of fostering quality and equity In addition it underlines the importance of identifying factors measuring changes in the effectiveness status of schools in terms of equity and points to the alternative strategies that can be used at school and system level In our attempt to encourage the further development and use of this methodology for school improvement purposes we demonstrate how experimental studies can be conducted to discover whether and under which conditions the proposed methodology can help schools promote both quality and equity Finally implications for school evaluation research educational policy and practice are drawn In this way the book contributes significantly to the debate on how quality and equity can be achieved and encourages policy makers and practitioners not to view these two dimensions of effectiveness as being in competition with each other but as constituting the major objectives of any reform policy and or improvement effort at school and or national levels
