Vandenabeele,Howell Edwards,2018-10-26 Ten years after the first volume this book highlights the important contribution
Raman spectroscopy makes as a non destructive method for characterising the chemical composition of objects with
archaeological and historical importance The original book was ground breaking in its concept but the past ten years have
seen some advancement into new areas consolidation of some of the older ones and novel applications involving portable
instrumentation on site in museums and in the field This new volume maintains the topic at the cutting edge the Editors have
approached prominent contributors to provide case studies sorted into themes Starting with a Foreword from the British
Museum Director of Scientific Research and an Introduction from the Editors which offer general background information
and theoretical context the contributions then provide global perspectives on this powerful analytical tool Aimed at scientists
involved in conservation conservators and curators who want to better understand their collections at a material level and

experimentation with the most useful reporter genes for mammalian systems that are available concentrating on those
marker genes that are currently most commonly used Among the topics covered in this volume are methodologies for
staining and visualization of galactosidase in embryos and tissues immunohistochemical detection of galactosidase detection
of reporter gene expression in murine airways and three dimensional analysis of molecular signals with episcopic imaging
techniques Also covered in this groundbreaking text are fluorescent proteins detection of GFP during nervous system
development fluorescent protein reporter systems for single cell measurements and non invasive imaging of molecular events
