the cockpit of airplanes and spacecraft alike and on his Mercury mission he became the last American ever to rocket into space alone He flew in the Mercury and Gemini programs and served as head of flight crew operations in both the Apollo and Skylab programs Based on extensive research and first person interviews this is a complete history of the Faith 7 flight and its astronaut Cooper later gained notoriety following the release of the movie *The Right Stuff* in which he was depicted by Dennis Quaid but Burgess discovers there was even more drama to his story It completes the *Pioneers in Early Spaceflight* subseries in fitting fashion *The Mammoth Book of Space Exploration and Disaster* Richard Russell Lawrence, 2011-09-01

In the words of those who trod the void and those at mission control here are over 50 of the greatest true stories of suborbital orbital and deep space exploration From Apollo 8 s first view of a fractured tortured landscape of craters on the dark side of the Moon to the series of cliff hanger crises aboard space station Mir they include moments of extraordinary heroic achievement as well as episodes of terrible human cost Among the astronauts and cosmonauts featured are John Glenn Pavel Beyayev Jim Lovell Neil Armstrong Buzz Aldrin Valery Korzun Vasily Tsibliyev and Michael Foale Includes First walk in space by Sergei Leonov and his traumatic return to Earth Apollo 13 s problem the classic nail biting account of abandoning ship on the way to the Moon Docking with the frozen empty Salyut 7 space station that had drifted without power for eight months Progress crashes into Mir the astronauts survive death by a hair s breadth Jerry Linenger s panic attack during a space walk just out there dangling *Flight International* ,1964 **StarBriefs 2001** ,2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory *StarGuides* or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions **Digital Airborne Camera** Rainer Sandau, 2009-12-10

Digital airborne cameras are now penetrating the fields of photogrammetry and remote sensing Due to the last decade s results in research and development in the fields of for instance detector technology computing power memory capacity position and orientation measurement it is now possible to generate with this new generation of airborne cameras different sets of geometric and spectral data with high geometric and radiometric resolutions within a single flight This is a decisive advantage as compared to film based airborne cameras The linear characteristic of the opto electronic converters is the basis

for the transition from an imaging camera to an images generating measuring instrument Because of the direct digital processing chain from the airborne camera to the data products there is no need for the processes of chemical film development and digitising the film information Failure sources as well as investments and staff costs are avoided But the effective use of this new technology requires the knowledge of the features of the image and information generation its possibilities and its restrictions This book describes all components of a digital airborne camera from the object to be imaged to the mass memory device So the image quality influencing processes in nature are described as for instance the reflection of the electromagnetic sun spectrum at the objects to be imaged and the influence of the atmosphere Also the essential features of the new digital sensor system their characteristics and parameters are addressed and put into the system context The complexity of the cooperation of all camera components as for instance optics filters detector elements analogue and digital electronics software and so forth becomes transparent The book includes also the description of example systems
