Hensher, 2010-04-08 It is increasingly common for analysts to seek out the opinions of individuals and organizations using attitudinal scales such as degree of satisfaction or importance attached to an issue Examples include levels of obesity seriousness of a health condition attitudes towards service levels opinions on products voting intentions and the degree of clarity of contracts Ordered choice models provide a relevant methodology for capturing the sources of influence that explain the choice made amongst a set of ordered alternatives The methods have evolved to a level of sophistication that can allow for heterogeneity in the threshold parameters in the explanatory variables through random parameters and in the decomposition of the residual variance This book brings together contributions in ordered choice modeling from a number of disciplines synthesizing developments over the last fifty years and suggests useful extensions to account for the wide range of sources of influence on choice

Applications provides a cogent and comprehensive introduction to the area of multilevel modeling for methodological and applied researchers as well as advanced graduate students. The book is designed to be able to serve as a textbook for a one or two semester course in multilevel modeling. The topics of the seventeen chapters range from basic to advanced yet each chapter is designed to be able to stand alone as an instructional unit on its respective topic with an emphasis on application and interpretation. In addition to covering foundational topics on the use of multilevel models for organizational and longitudinal research, the book includes chapters on more advanced extensions and applications such as cross classified random effects models, non linear growth models, mixed effects location scale models, logistic ordinal and Poisson models and multilevel mediation. In addition, the volume includes chapters addressing some of the most important design and analytic issues including missing data, power analyses, causal inference, model fit and measurement issues. Finally, the volume includes chapters addressing special topics such as using large scale complex sample datasets and reporting the results of multilevel designs. Each chapter contains a section called Try This which poses a structured data problem for the reader. We have linked our book to a website <http://modeling.uconn.edu> containing data for the Try This section, creating an opportunity for readers to learn by doing. The inclusion of the Try This problems, data and sample code eases the burden for instructors who must continually search for class examples and homework problems. In addition, each chapter provides recommendations for additional methodological and applied readings.

**Urban and Regional Data Management** Claire Ellul, Sisi Zlatanova, Massimo Rumor, Robert Laurini, 2013-05-23. The Urban Data Management Society has organised international symposia at various locations throughout Europe since 1971 and UDMS 2013 marks its second visit to London. From its outset UDMS has highlighted changes and trends in urban data and urban data management. However, the rate of emergence of new data and new technologies has never been as rapid as it is now. Trends including smart cities, smart phones, social media, 3D modelling, volunteered geographic information, building information modelling and the internet of things all generate information about the urban environment and the people who live there. Additionally, the volume of data generated in part through such techniques has in turn resulted in research into big data, how best to handle the data, analyse it, visualise it in different contexts. Thus, the challenges and opportunities facing those working with these new types of urban data are manifold. Given this, the general theme for UDMS 2013 was Recent and Emerging Trends in the Management of New Urban Data. This book contains 20 papers selected from the long papers that were submitted for UDMS 2013. Each paper was reviewed by three independent academic reviewers from around the world, both for academic quality and for clarity in communication. The book is intended to be suitable for different readers, from city planners and architects to academics, students and policy makers, and those involved in urban planning.
