

## ORECK USE & MAINTENANCE

### Disassembling the Handle

**Note:** The upper handle assembly is held in place by two spring loaded pins. To remove the handle, both spring loaded pins must be depressed at the same time.

1. Place the unit on a table so that the vacuum handle is at eye level.
2. Facing the front of the vacuum, flip rubber covers A & B up. Keep both flaps flipped upright.
3. Locate the silver-colored push pin under flaps A & B.
4. Use a small household item such as a ballpoint pen, screwdriver, or paper clip to depress the silver-colored push pin. While keeping an upward pull on the handle, insert the tip of the household item into the silver-colored push pin until you feel a release.

**NOTE:** When button is depressed make sure to keep handle slightly pulled up.

5. Rotate the vacuum 180 degrees and repeat steps 1-4 in flap B.
6. After depressing both silver-colored push pins in flaps A & B, the handle will release.

### Stuffing or Blockage

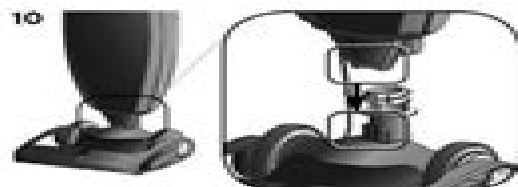

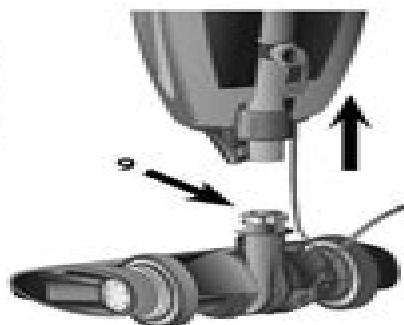

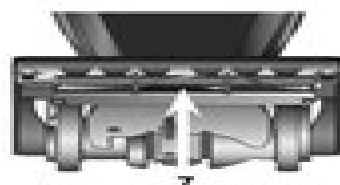

**IMPORTANT:** On plush and new carpets, stuffing may accumulate inside the intake tube and the lower tube assembly. This is due to excessive fuzz and loose cuttings in the carpet. Stuffing could accumulate during the first few cleanings until all the loose material is removed. Due to the high efficiency of the vacuum, many older carpets will cause stuffing when the vacuum is first used on them. If your vacuum does not pick up properly, or makes unusual noise and the outer bag does not fluff up or balloon open, follow these steps:

**⚠ WARNING:** Unplug cord from electrical outlet before servicing.

7. Check for blockage at the mouth of the intake opening. If there is blockage, remove it with long-nose pliers, a screwdriver or coat hanger.
8. Twist lower collar counterclockwise to slide up. Pull tube out of base. Check for blockage. If blockage is in the tube, remove with a coat hanger.
9. If tube is not blocked, look into fan housing. Remove debris with long-nose pliers, a screwdriver or coat hanger.
10. Insert tube and push down until the tube is sealed. Make sure O-ring is in place against fan housing opening.
11. To finish reassembly, replace and tighten collar clockwise until collar locking tabs are locked in place.

**NOTE:** Many times blockage occurs due to a full disposable inner bag causing dirt to travel back down the air flow system. When that happens, the blockage will be at the top of the system, starting in the area where the disposable inner bag connects to the connector assembly. If the above actions do not correct the problem, contact an Oreck authorized service center or call the customer service center.
