Organizational Transformation And Learning A Cybernetic Approach To Management:

Organizational Transformation and Learning Raúl Espejo,1996-06-03 Complexity is a key issue of organizational concern for 21st century business practices The purpose of this book is to show both theoretically and practically how cybernetics can contribute to the problem in terms of information systems and strategic pr **Cybernetics and Systems Theory in Management: Tools, Views, and Advancements** Wallis, Steven E.,2009-12-31 Cybernetics and Systems Theory in Management Tools Views and Advancements provides new models and insights into how to develop test and apply more effective decision making and ethical practices in an organizational setting **Organization Structure: Cybernetic Systems Foundation** Yasuhiko Takahara,Mihajlo Mesarovic,2012-12-06 Organization Structure Cybernetic Systems Foundation utilizes a cybernetic systems framework for the study of organizations using GST General Systems Theory and presents a comprehensive formal view of organizations assessing regulation coordination and adaptation managements The use of GST in this book is in sharp contrast to previous attempts It addresses structural problems totally based on qualitative non numerical mathematics The book lays a framework for initial efforts to investigate the potential of using formal GST to address organizational dilemmas The text has been tested in several graduate courses It can serve as an excellent textbook or reference for graduate level research in this field as well as a reference for researchers in related fields **Systems Science and Cybernetics - Volume II** Francisco Parra-Luna,2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires

taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Achieving Business Value in Information Security Torsten Kriedt, 2002-10-30 Inhaltsangabe Abstract The beginning of the 21st century with the fear of the Year 2000 threat Y2K became a milestone for the Information Age a term coined for the post industrial stage of leading countries when information and information technologies become the main strategic national resource which results in an avalanche growth of information dependence in all spheres of society and state activities In organisations the awareness of the dependence on information has led to corporate initiatives to treat information as an asset which includes various efforts for its protection Management trends such as knowledge management have identified knowledge sharing as a new means for achieving competitive advantage thus promoting information to be disseminated Due to an ever closer relationship with customers suppliers and even competitors organisations have expanded their information network outside of the original boundaries The dualism of protection of information assets on the one hand and a free flow of information has been identified to become a challenge for organisations described as how to satisfy this need to share information without exposing the organization to undue risk With the information society implying radical changes the need to act has been accelerated by a new mindset reacting to the advent of e business Information Security InfoSec is often mistaken to be a purely technical issue handled by information system IS departments and used as a synonym for firewall access controls and encryption of e mails However because of the risks involved for an organisation including legal liabilities loss of trust and severe financial damage InfoSec needs to be a top management issue Then again although paying lip service to treating information as an asset top management usually does not act upon it the average InfoSec spending in the U S today is only 0.4 percent of an organisation's revenue In the following work it will be shown that a new approach to and a new understanding of InfoSec is vital for organisations to excel in the challenges faced by the information environment of the 21st century The key focus of this study is to link existing InfoSec approaches to the concept of business value by ensuring their strategic fit with the corporate objectives The first part will provide a common foundation with an evaluation of the role of information for organisations relevant trends

Cybernetic Revolutionaries Eden Medina, 2014-01-10 A historical study of Chile's twin experiments with cybernetics and socialism and what they tell us about the relationship of technology and politics In Cybernetic Revolutionaries Eden Medina tells the history of two intersecting utopian visions one political and one technological The first was Chile's experiment with peaceful socialist change under Salvador Allende the second was the simultaneous attempt to build a computer system that would manage Chile's economy Neither vision was fully realized Allende's government ended with a violent military coup the system known as Project Cybersyn was never completely implemented but they hold lessons for today about the relationship between technology and politics Drawing on extensive archival material and interviews

Medina examines the cybernetic system envisioned by the Chilean government which was to feature holistic system design decentralized management human computer interaction a national telex network near real time control of the growing industrial sector and modeling the behavior of dynamic systems She also describes and documents with photographs the network s Star Trek like operations room which featured swivel chairs with armrest control panels a wall of screens displaying data and flashing red lights to indicate economic emergencies Studying project Cybersyn today helps us understand not only the technological ambitions of a government in the midst of political change but also the limitations of the Chilean revolution This history further shows how human attempts to combine the political and the technological with the goal of creating a more just society can open new technological intellectual and political possibilities Technologies Medina writes are historical texts when we read them we are reading history
