

Throttle Stop Adjustment

8. Move the throttle lever to the wide open throttle (WOT) position. Loosen the locknut and adjust the full throttle stop screw to permit full throttle shutter opening at WOT. Check to be sure the throttle at WOT. Shutters do not act as a throttle stop. Use a feeler gauge and check the clearance between the roller and the throttle cam at WOT. This clearance should be 0.010 - 0.015 (0.25-0.38mm). Tighten the locknut to hold the adjustment. Install the spark plugs. Connect the white/black wire between the prop stabilizer or ignition module and the switch box.

Idle Adjustment

9. Connect a flush device to the lower unit. NEVER operate the powerhead over 1000 rpm with a flush device attached, because the engine may "RUNAWAY" due to the no load condition on the propeller. A "runaway" engine could be severely damaged. Connect the fuel line to a fuel source. Run the electrical harness into the engine compartment. Remove the engine cooling. Connect a tachometer to the engine.

CAUTION: Water must circulate through the lower unit to the engine any time the engine runs to prevent damage to the water pump in the lower unit. Just five seconds without water will damage the water pump.

Start the engine and allow it to warm to operating temperature.

Remove the cable barrel from the barrel retainer, and loosen the locknut on the idle adjustment screw. Shift the engine into FORWARD gear. Adjust the idle rpm to the proper rpm as listed in the Specifications in the Appendix. Tighten the locknut to hold

the adjustment. With the end of the throttle cable connected to the throttle lever, hold the throttle lever against the idle stop. Adjust the throttle cable barrel to slip into the barrel retainer on the cable anchor bracket with a very light preload of throttle lever against the idle stop. Lock the barrel in place.

BAD NEWS:

An excessive preload on the throttle cable can cause difficulty when shifting from FORWARD gear to NEUTRAL.

The preload may be easily checked by placing a piece of paper between the idle stop screw and the idle stop, and then withdrawing it. If the paper does not tear, but drag can still be felt, the preload is correct. Adjust the cable barrel, if necessary, to obtain the proper preload just described. Install the powerhead cowling.
