Herbal Treatment of Major Depression Scott D Mendelson, 2019-10-16 This unique volume presents new understandings of the neurochemical nature of major depression and how herbs and their constituent flavonoids and

terpenes appear to address some of the mechanisms now thought to be involved It explores how recent studies of the rapid antidepressant effects of ketamine inform neuroscientists about deep intracellular mechanisms of antidepressant action that have little to do with simple enhancement of monoaminergic activity These mechanisms include actions on PI3K Akt mTOR GSK3 BDNF and other intracellular pathways New theories of the pathophysiology underlying major depression such as oxidative damage inflammation stress and insulin resistance are then explored Key Features Focuses on oxidative damage inflammation and metabolic syndrome Explains that a significant percentage of people treated for major depression obtain little if any relief from standard antidepressant medications These facts lead to discussion of herbs that can be used to treat major depression as well as consideration of the scientific basis for how these herbs act The antidepressant properties of 66 herbs are discussed along with dosing and safety information      **Herbal Treatment of Anxiety** Scott D.

Mendelson,2022-07-25 Herbal Treatment of Anxiety Clinical Studies in Western Chinese and Ayurvedic Traditions explains the nature and types of anxiety its neurobiology the pathophysiology that exacerbates and perpetuates it and the psychopharmacology of the chemical agents that relieve its manifestations Throughout the text are discussions of Western Chinese and Ayurvedic herbal treatments that have been clinically shown to be effective in relieving anxiety The book also features a scientific discussion of the use of herbs and essential oils in aromatherapy and the mechanisms by which they may work The book concludes by providing bases upon which herbs can be chosen to treat the anxiety of patients according to their individual needs Additional features include Examines the increasingly popular subject of the use of herbs as a natural alternative treatment and provides a much needed scientific basis for treatments often considered as merely folk medicine Discusses the psychoactive phytochemicals contained in herbs Includes a chapter discussing the nature and mechanisms of action of adaptogens Adds to the armamentarium of anxiolytics for providers who have become reluctant to prescribe benzodiazepines as treatment of anxiety particularly in the context of the opiate crisis Gives an introduction to herbal treatments of traditional Chinese and Ayurvedic medicine Offers practical advice on initiating and managing herbal treatments Herbal Treatment of Anxiety is a valuable reference for psychiatrists psychiatric nurse practitioners primary care providers naturopathic doctors and therapists interested in the most current scientific information on the effects of herbal treatments of anxiety disorders      **Routledge Handbook of Science, Technology, and Society** Daniel Lee

**Blood Sugar** Anthony Ryan Hatch,2016-04-10 Why do African Americans have exceptionally high rates of hypertension diabetes and obesity Is it their genes Their disease prone culture Their poor diets Such racist explanations for racial inequalities in metabolic health have circulated in medical journals for decades Blood Sugar analyzes and challenges the ways in which metabolic syndrome has become a major biomedical category that medical researchers have created to better understand the risks high blood pressure blood sugar body fat and cholesterol pose to people An estimated sixty million Americans are well on the way to being diagnosed with it many of them belonging to people of color Anthony Ryan Hatch argues that the syndrome represents another very real crisis and that its advent signals a new form of colorblind scientific racism a repackaging of race within biomedical and genomic research Examining the cultural discussions and scientific practices that target human metabolism of prescription drugs and sugar by African Americans he reveals how medical researchers who use metabolic syndrome to address racial inequalities in health have in effect reconstructed race as a fixed biological genetic feature of bodies without incorporating social and economic inequalities into the equation And just as the causes of metabolic syndrome are framed in racial terms so are potential drug treatments and nutritional health interventions The first sustained social and political inquiry of metabolic syndrome this provocative and timely book is a crucial contribution to the emerging literature on race and medicine It will engage those who seek to understand how unjust power relations shape population health inequalities and the production of medical knowledge and biotechnologies
