Environmental Protection Agency. Library Systems Branch,1974 *Laboratory Manual of Meteorology, 6th Edition* Terry Dyroff,2013-03-03 This manual has been designed to accompany an introductory college course in meteorology It has been used in a four credit hour course with a three hour per week lab for many years The manual has been continually revised and upgraded taking into account the advice of thousands of students and numerous instructors who have used it It is one of the few truly hands on lab manuals on the market It is not just a series of discussions followed by questions about the reading as is often the case with other ME lab activity manuals It tackles those subjects for which there is no substitute for doing as opposed to just hearing or reading about The authors have written detailed instructions for each lab The purpose of so much written detail is to reduce the time needed for verbal instructions by the teacher to allow students to do the lab on their own outside of class if they prefer or as an extra credit project to facilitate make ups by students who were absent and finally to allow students to review before a lab exam For this reason the manual is ideal for a college professor or high school teacher whose primary field is not meteorology Most lab materials needed for the exercises are commonly available in physical science departments those that are not can be constructed without special skills The authors are available for further explanation including advice on how to secure and construct lab materials Do not let the low price mislead you The authors are making the manual available with no royalties for themselves You may contact Terry Dyroff Professor Emeritus Montgomery College Rockville MD by email darsdyr verizon net for further information
