Methodological Misconceptions In The Social Sciences Rethinking Social Thought And Social Processes:

Methodological Misconceptions in the Social Sciences Angelo Fusari, 2014-03-31 This book offers a systematic view of social analysis that will advance the communication of results between different academic disciplines. It overcomes misunderstandings that are due to the use of an unstructured variety of methodological traditions in the analysis of complex socioeconomic and political processes. The book focuses on the special features of human society: humans as subjects, non-repetitiveness and irreversibility of social actions, and the peculiar relations between necessity and possibility in human action. It defines methodological criteria, procedures, and rules that enable researchers to select and classify realistic hypotheses to derive general principles and basic organizational features. It then applies these criteria in critical reviews of major theories and interpretations of society and history, offering clarifications and alternative proposals with regard to crucial aspects of anthropological, political, juridical, sociological, and religious thought. *Money, Valuation and Growth* Hasse Ekstedt, 2015-09-16 We have experienced an era of extreme anti-inflationary policy combined with debts and deficits, the result of which has been a decrease in social stability. This book examines how using mainstream theory as the basis for economic decisions leads to misunderstandings of central concepts of our economic reality. It aims to establish a better understanding of the discrepancies between the current mainstream economic theory and the economy experienced in business and politics. This ambitious and wide-ranging volume begins the project of rethinking the approach of economics to money. In this new light, concepts such as valuation, price, uncertainty, growth, and aggregation are interpreted differently, even as analytical inconsistencies and even intrinsic contradictions between these concepts arise. A central theme of the book is the use of money as a measure and whether the disconnect between money as a form of measurement and money as it is used in the real world can be maintained. This book calls for a radical rethinking of the basis of much of the modern study of economics. It will be of interest to researchers concerned with monetary economics, finance, political economy, and economic philosophy. **Understanding the Course of Social Reality** Angelo Fusari, 2016-08-27 This book offers a comparison between our earthly society and the society of a hypothetical twin planet, with the aim to understand and deal with some of the main problems of our global society as well as to advance interaction with some extra-terrestrial society, no less advanced than ours, that sooner or later will be discovered. The underlying premise of the book is that the contemporary world finds itself in what may well be the most confused age of human history. Growing technological changes and innovation make it difficult to understand the course of social reality, while the intensification of the relations between different regions of the Earth and the power achieved by financial capital on a world scale amplify the dimensions and visibility of disequilibria and iniquities and sharpen frustration and sentiments of insecurity. Social thought, as it has developed at the service of a quasi-stationary world, lacks the ability to understand and govern the tumultuous economic and social processes in progress. The most efficacious way to meet this fleeting social reality is to scientifically highlight basic institutions and values and their

steady changes caused by the accumulation of creative and choice processes In doing so long run trends can be explored in order to understand and manage the disequilibrating reequilibrating motion characterizing the life of dynamic societies This book shows the necessity of institutional and ethical transformations utilizing an utopian flavour Integrating the Human Sciences Rick Szostak,2022-11-15 What if we recognized that the human sciences collectively investigate a few dozen key phenomena that interact with each other Can we imagine a human science that would seek to stitch its understandings of this system of phenomena into a coherent whole If so what would that look like This book argues that we are unlikely to develop one unified theory of everything Our collective understanding must then be a map of the myriad relationships within this large but finite and manageable system coupled with detailed understandings of each causal link and of important subsystems The book outlines such a map and shows that the pursuit of coherence and a more successful human science enterprise requires integration recognizing the strengths and weaknesses of different methods and theory types and the pursuit of terminological and presentational clarity It explores how these inter connected goals can be achieved in research teaching library classification public policy and university administration These suggestions are congruent with and yet enhance other projects for reform of the human sciences This volume is aimed at any scholar or student who seeks to comprehend how what they study fits within a broader understanding **Economics, Ethics and Power** Hasse Ekstedt,2018-07-11 Economic theory in its neoclassical form is sometimes regarded as free from values it is simply the theory of economic exchange This can only hold true if we accept the idea of Homo Economicus and the equilibrium economy But in the real world away from neoclassical models there is no intrinsic stability as such Instead stability is created by the surrounding social cultural and political structures Clearly it is imperative that ethics features in the analysis of these economic and socio political structures Drawing on Aristotle Kant Hume and others this book conceptualizes the analysis of ethics and economic and social structures It first considers the key philosophical underpinnings and categories which frame the discussion of ethics in economic theory and then considers individual ethics social action financial structures and war Throughout ethics are examined in a multicultural context with structural complexities and the difficulties in finding a coherent set of ethics which provides social cohesion and an open society are considered A key part of this is the comparison of two ethical principles which can be adopted by societies ius soli or loyalty to constitution and ius sanguinis or loyalty to Blood and Soil The latter is argued to lead to problems of Us and the Other Introducing the possibility of integrating microscopic ethics into socio political structures and proposing the eventual existence of a global ethics this volume is a significant contribution to the emerging literature on economics social structures and ethics It will be of particular interest to those working in business and public administration and who have an education in socio economic areas but it also has a broad appeal to students and academics in the social sciences **A New Economics for Modern Dynamic Economies** Angelo Fusari,2016-10-04 It is becoming increasingly clear that a new economics is required for investigating modern

dynamic economies and the coming social world Important features of those economies such as innovation uncertainty and entrepreneurship are usually considered capitalist features This may have been true historically but this book argues that the contrary will be true for the future the full and efficient operation of those supposed capitalist features will increasingly require the overcoming of capitalist civilization In this book Angelo Fusari constructs a theoretical framework for the interpretation and management of modern dynamic economies which demonstrates that institutional transformations are essential if we are to move beyond the current consumer capitalist age and the age of the domination of financial capital A New Economics for Modern Dynamic Economies opens with a consideration of the basic aspects of modern dynamic economies and proceeds to develop a representation of the whole economic system centred on the interrelationships between entrepreneurship innovation and radical uncertainty in a dynamic competition process This model provides an explanation of business cycles that largely differs from current explanations as it derives from the notion of dynamic competition The book is then extended from the sectoral to the micro level and then to the level of the firm The second half of the book is concerned with operational problems and in particular with the integration of this analysis of cycles with the notion of historical phases of development The final chapter explores the route of the transition from capitalism to a new economic and social order a transition of vital importance both for the contemporary world and for the coming world This volume is of great interest to those who study political economy macroeconomics and economic theory and philosophy The book shows the possibility of a scientific explanation of important ethical principles as indispensable to the organizational efficiency of the social system for instance the necessity and the way to conciliate productive efficiency social justice and individual freedom

Socioeconomic Inclusion During an Era of Online Education Garcia, Manuel B., 2022-06-24 The unwelcomed arrival of the COVID 19 pandemic has exacerbated inequities and inequalities in accessing educational opportunities among different social groups Abruptly the idea of inclusivity in education has become more of an abstract phenomenon that widens the digital divide and creates social injustice The resulting intensification of digital disparities demands an immediate coordinated response from all education and government stakeholders to guarantee that no one is left behind as we navigate the so called new normal Without an appropriate intervention and sound policy guidance negative repercussions may be so widespread that they will remain a problem in the education sector far into the future Socioeconomic Inclusion During an Era of Online Education aims to answer emerging questions on inclusive online education by exploring and collating the experiences and lessons learned during the implementation of emergency remote education With the earlier than expected arrival of the online education era best practices and innovative approaches from various educational institutions are concrete paradigms for safeguarding the promise of an undivided future of learning through equal access to quality education from a distance Covering topics from learning space to education governance this reference work is ideal for policymakers administrators practitioners researchers scholars instructors and students seeking to adjust and adapt to

F. A. Hayek Peter J. Boettke, 2018-09-05

This book explores the life and work of Austrian-British economist, political economist, and social philosopher Friedrich Hayek. Set within a context of the recent financial crisis alongside the renewed interest in Hayek and the Hayek-Keynes debate, the book introduces the main themes of Hayek's thought. These include the division of knowledge, the importance of rules, the problems with planning and economic management, and the role of constitutional constraints in enabling the emergence of unplanned order in the market by limiting the perverse incentives and distortions in information often associated with political discretion. Key to understanding Hayek's development as a thinker is his emphasis on the knowledge problem that economic decision makers face and how alternative institutional arrangements either hinder or assist them in overcoming that epistemic dilemma. Hayek saw order emerging from individual action and responsibility under the appropriate institutional order that itself emerges from actors discovering new and better ways to coordinate their behavior. This book will be of interest to all those keen to gain a deeper understanding of this great 20th-century thinker in economics.

Resources in Education, 1994 Aging within Transnational Families Vincent Horn, 2019-03-15

Aging within Transnational Families is the first book to provide a multi-method approach to studying aging across borders. By asking how, why, and to what extent do older Peruvians engage in transnational family ties and practices, the book enhances our knowledge about aging across borders. Drawing on the care circulation framework and the capacity and desire approach, it explores the motivations of older Peruvians' transnational involvement as well as the factors influencing the scope and propensity of their cross-border practices. From a lifecourse perspective, the book asks how age relates to older Peruvian migrants' integration into the host society and engagement in the sending of remittances and visits of family members in Peru. Exploring the prevalence and structuring features of family-related transnational practices against the backdrop of different migration regimes, Aging within Transnational Families shows how policies affect transnational family configurations and the role of older people within them.

Writing across Contexts Kathleen Yancey, Liane Robertson, Kara Taczak, 2014-05-15

Addressing how composers transfer both knowledge about and practices of writing, Writing across Contexts explores the grounding theory behind a specific composition curriculum called Teaching for Transfer (TFT) and analyzes the efficacy of the approach. Finding that TFT courses aid students in transfer in ways that other kinds of composition courses do not, the authors demonstrate that the content of this curriculum, including its reflective practice, provides a unique set of resources for students to call on and repurpose for new writing tasks. The authors provide a brief historical review, give attention to

,Shuhua An,Lianchun Dong,2024-05-31 There is no doubt that the onset of a new decade has brought high expectations of academic progress for scholars especially for researchers in mathematics education The International Group for the Psychology of Mathematics Education was born in 1976 which focused on the international exchange of knowledge in the psychology of mathematics education the promotion of interdisciplinary research with psychologists mathematicians and

mathematics teachers and the development of the psychological aspects of teaching and learning mathematics and its implications *Improving Bayesian Reasoning: What Works and Why?* Gorka Navarrete, David R. Mandel, 2016-02-02 We confess that the first part of our title is somewhat of a misnomer Bayesian reasoning is a normative approach to probabilistic belief revision and as such it is in need of no improvement Rather it is the typical individual whose reasoning and judgments often fall short of the Bayesian ideal who is the focus of improvement What have we learnt from over a half century of research and theory on this topic that could explain why people are often non Bayesian Can Bayesian reasoning be facilitated and if so why These are the questions that motivate this Frontiers in Psychology Research Topic Bayes theorem named after English statistician philosopher and Presbyterian minister Thomas Bayes offers a method for updating one's prior probability of an hypothesis H on the basis of new data D such that $P(H|D) = \frac{P(D|H)P(H)}{P(D)}$ The first wave of psychological research pioneered by Ward Edwards revealed that people were overly conservative in updating their posterior probabilities i.e. $P(H|D)$ A second wave spearheaded by Daniel Kahneman and Amos Tversky showed that people often ignored prior probabilities or base rates where the priors had a frequentist interpretation and hence were not Bayesians at all In the 1990s a third wave of research spurred by Leda Cosmides and John Tooby and by Gerd Gigerenzer and Ulrich Hoffrage showed that people can reason more like a Bayesian if only the information provided takes the form of non relativized natural frequencies Although Kahneman and Tversky had already noted the advantages of frequency representations it was the third wave scholars who pushed the prescriptive agenda arguing that there are feasible and effective methods for improving belief revision Most scholars now agree that natural frequency representations do facilitate Bayesian reasoning However they do not agree on why this is so The original third wave scholars favor an evolutionary account that posits human brain adaptation to natural frequency processing But almost as soon as this view was proposed other scholars challenged it arguing that such evolutionary assumptions were not needed The dominant opposing view has been that the benefit of natural frequencies is mainly due to the fact that such representations make the nested set relations perfectly transparent Thus people can more easily see what information they need to focus on and how to simply combine it This Research Topic aims to take stock of where we are at present Are we in a proto fourth wave If so does it offer a synthesis of recent theoretical disagreements The second part of the title orients the reader to the two main subtopics what works and why In terms of the first subtopic we seek contributions that advance understanding of how to improve people's abilities to revise their beliefs and to integrate probabilistic information effectively The second subtopic centers on explaining why methods that improve non Bayesian reasoning work as well as they do In addressing that issue we welcome both critical analyses of existing theories as well as fresh perspectives For both subtopics we welcome the full range of manuscript types
